21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

After considering several proposals, the City Plan Commission recommended Lewis Kitchen's Mansion House Center, citing its land use plan and the need for permanent residents downtown. The Plan Commissioners also held that the 3rd St. frontage would create a striking new City skyline. City booster group, Downtown St. Louis also endorsed the plan. Excavations were underway in August 1965.

The Mansion House Center was meant as a self-contained residential area for middle and upper-income people working in the City. The project used an FHA mortgage and federal agency officials had to be convinced that drywall was appropriate to use in a high-rise luxury apartment complex. Three residential towers with 1,250 apartments rose above a mixed-use base that housed offices, shops, airline agencies, restaurants and parking. The base's exterior of quartz concrete aggregate panels was intended to provide a contrast to the bronze duranodic aluminum curtain walls of the residential towers. A roof-top plaza above the shorter buildings was landscaped with fountains, pools and numerous sculptures, with an inter-denominational chapel at the southeast corner. Mansion House Center was one of the first developments to use the provision of applying 1% of the mortgage for financing artwork.

Low occupancy plagued the development. By the end of 1973, the conversion of the south tower into a 400-room hotel was underway. Schwartz, Henmi & Zobel were architects for the remodeling, that included the addition of 2 glass elevators on the hotel's east wall. With a Holiday Inn in the south tower and lower vacancy rates in the apartment towers, the Mansion House Center was stable during the mid-1970s.

See attached continuation sheet.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Mansion House development is a superblock, with 3 towers and several low-rise buildings, all connected by a common underground parking garage. Designed by Schwarz and Van Hoefen, the buildings are constructed with a steel frame enveloped by a curtainwall system. The 28-story towers were built as apartments, though one tower (at 200 N. 4th) has been converted to hotel use. The residential tower at 400 N. 4th is now called Gentry’s Landing, which fronts the street directly with a 3-story open portico supporting the building above. The hotel tower has a similar relationship to the street. The Mansion house tower sits behind a rectangular pool and fountain. Its portico appears to have been filled in with glass. All three towers have a projecting curtainwall grid and horizontal accents of cantilevered concrete balconies at the long faces.The low-rise (mostly 3 story) buildings have commercial and office uses. The concrete street facades feature vertically oriented window bays with one large glass opening per floor per bay on these two upper stories while the side or secondary facades are without openings. At street level, the Gentry's Landing tower columns have been altered and enclosed (circa 2009).

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The Stouffers Riverfront Inn development was part of the larger Civic Center Redevelopment near the riverfront, and offered modern hotel rooms and convention facilities strongly desired by the City.

A motel was part of the original conceptual plan for the downtown redevelopment area for the stadium and was consistently shown in the location where the Stouffer's Riverfront Inn was constructed. The Civic Center Redevelopment Corporation built the hotel, which was operated by Stouffer Restaurant and Motor Inn Division of Litton Industries. The Stouffer's Riverfront Inn was welcomed in downtown St. Louis as a luxury hotel that could host conventions with its underground ballroom and private dining/meeting rooms. A circular restaurant on the top floor revolved inside of fixed walls angled to minimize glare. The over 380 tower rooms featured floor-to ceiling windows. A swimming pool, children's wading pool and shuffleboard courts provided for family fun and were adjacent to the two-story "cabanna" wings. The tower building added in 1975 featured a ten-story central atrium that featured a space-frame structure and balconies overlooking the courtyard.

The Millenium Hotel, previously Stouffers Riverfront Inn, is a collection of low-rise, high-rise, and low-level buildings designed by William B Tabler Architects. The buildings were designed as a convention center, with the 30-story tower first and the 11-story elliptical tower added later. The high and low-rise buildings feature concrete foundations and structure, circular footprints, square fixed glass windows, and flat roofs. The low-level area features a curved footprint as well as the main entries to the hotel, large canopies supported by round posts, and a flared floating canopy with metal trussing and glass roofing adjacent to the low-rise building. Constructed at separate dates, the two towers have slightly different appearances but share a general aesthetic. The tall tower has a rotating restaurant at the top. The lower one has an interior atrium.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

These two twin parking garages were part of the Civic Center Redevelopment, also including the Stadium (ultimately named the Busch Memorial Stadium). As of 1960, the redevelopment was to include a series of other garages and surface parking, a bowling alley, two office buildings, a motel, and a restaurant, in a 27-block area.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

"$10,775,000 More is Pledged for Downtown Stadium as Donations Reach $15,775,000," St Louis Post-Dispatch 1/17/1960 and map Post-Dispatch 1/31/1960.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This building, a mirror of its neighbor at 500 Pine St, has a rectangular footprint encompassing one city block and is 8 stories in height. It has a concrete foundation and structure with a mix of concrete and metal cladding. On the upper 7 stories (used as a garage) the façade is enveloped by a vertically oriented concrete sunscreen. Behind the screen the garage is open deck with concrete parapet walls. The first story, with commercial use, features concrete and brick cladding, large metal clad pilasters, and a bay of slender fixed windows. Metal sky bridges connect the building to its neighbors crossing both Pine and 6th Streets.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

In 1960, Famous-Barr announced it was constructing the garage on the block bounded by Sixth, Seventh, Olive and Pine. It is 10 stories plus roof deck, a total of 269,000 sf. Much earlier in 1944, Famous-Barr planned to construct three new "modern" stores at N. Kingshighway and Natural Bridge, S. Kingshighway at Chippewa, and on Forsythe Bldvd east of Jackson Ave, just east of Clayton city limits. In addition, the store planned a new parking garage at the southwest corner of Sixth and Pine and a 7-story addition to an existing warehouse at Market St and Spring Avenue. (The garage on the south side of Pine mentioned in the 1944 article was not constructed).

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

"$7,500,000 Postwar Program Announced by Famous-Barr," St. Louis Post-Dispatch October 15, 1944. Also Richard Longstreth compliation of "Customer Parking Garages Built for Department Stores, 1920-1960," revised 12/1/2009.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This parking garage features an L shaped footprint with a circular tower to one corner. The tower serves as the vertical circulation for the garage and is constructed of reinforced concrete and a core of concrete blocks allowing for the edges of the spiral to be free from supports creating a ribbon effect. Wedge-shaped concrete supports extend from the center outwards under each floor to support the weight of traffic. Street level, both the tower and the garage feature commercial business property with stone and concrete cladding. Additionally, a sky-bridge connects this garage to the garage across Pine St.

McCue, George. The Building Art in St. Louis: Two Centuries, 1967 & 1981 editions.

so Matt Bivens, NR Nomination for Executive Office Building (St. Louis).

Also City building permit #D7296; Emory Roth & Sons, NY, Architect; Goodnor CC, Long Island City, contractor 4/25/1968: "31-story office building for Arlen of St Louis, owner".

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Laclede Gas Building was designed by Emery Roth & Sons Architects. It has a rectangular footprint consisting of a high-rise office tower and a 3 story bank. Both portions feature concrete foundations, bronze aluminum and glass curtain wall, and flat roofs. The street level facades have a storefront appearance with large glass windows and minimal obstruction. The bank's upper two stories have smaller windows with tinted glass and project over the first story slightly. This line is carried through the tower's base with the same recessed space; however the tower's support columns separate from the building and stand in front of the inset.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

City building permit #B8455, 4/21/1965. Sverdrup & Parcel Assocs., architects & engineers. G. L. Tarleton CC, contractor. "10-level sleketon parking garage."

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Stadium Park West Parking Garage has a rectangular footprint with circular inset ramps at each corner. It is enveloped in a metal open-air structure providing shade and ventilation as well as obscuring the reinforced concrete structure of the open deck 7 level garage itself. It also features a black metal and tinted glass sky-bridge crossing Walnut St and an open walkway crossing 8th St. Both the 8th and 9th St. façades have a recessed section where the metal screen's bars are red rather than gray. It is a mirror of the Stadium Park East Parking Garage.

St Louis building permit R8022, 9/11/1947: "2-story radio station on existing foundation 1213 Cole". Mauren, Russell, Crowell & Mullgardt, architects; Gambel CC, contractor. Also H6539, 9/12/1963; H11514, 9/30/1954.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This TV Broadcasting Station building has a rectangular footprint, concrete foundation, brick cladding, casement windows, and a flat roof. There is a radio tower atop the building at its northeast corner and satellite dishes mounted to the roof. The main façade features ribbon windows at both levels with simple metal sunshades projecting over the sidewalk. The main entry is the focal point of the façade. Projecting outwards to the same plane as the horizontal sun shades, the “bay” has sloping glass at top and bottom. The open metal-truss mast next to the building is 528 feet high.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The Wendell O. Pruitt School was one of the first group of eight elementary schools built in the city to address the over-crowded conditions of schools at the time. Most of the new schools were on the north side of the city. The architect, Ray Leimkuehler, designed at least three elementary schools that were built in 1954.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Wendell Oliver Pruitt Public School is an L shaped building with varying heights, 3 stories at its tallest, and with flat roofs. Located adjacent to Desoto Park and the site of the former Pruitt-Igoe complex, this building features fire-proof construction and brick faced curtain walls. It has concrete foundations, english bond brick cladding and multi-paned windows as well as bays of glass block windows with stone sills, marble and stone tiles around the main entry, and marble or concrete supports for the canopies and overhangs. The school's main entry has marble tile cladding and concrete decorative projections that undulate up the three stories to the cornice. The school was designed by F. Ray Leimkuehler and was part of the Pruitt-Igoe development (11-story modular buildings). The back area includes an assembly with stage, play room, and cafeteria (moving W to E).

City building permit #A2, 11/9/1954. P. John Hoener & Assocs., architect; Murch-Jarvis CC., contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This building is a trapezoidal four story structure with concrete foundation, brick cladding, industrial steel sash multi-pane triple windows, and a flat roof. Set on a sloped grade, the lowest level is accessible at the main entry from 23rd St but is below grade on Jefferson Ave. The 23rd St façade, remodled to become the main entrance, features a recessed entry with processional stairs leading up to the main floor with curved glass block windows. Each façade features bays of windows. The north façade, sharing a party wall with the adjacent building, is concrete while the remaining facades are brick. A garage door features concrete tiles in a frame extending from the top of the door to the crest of the building. On Delmar near Jefferson cast stone panels extend above an altered entrance to the roofline.

The American Federation of Musicians building is a small rectangular single story building. The building features a decorative copper frieze below stone coping and a projecting copper canopy over an aluminum storefront vestibule. This canopy sits apart from the building providing a reveal at the bricks and marked by a mosaic tile pattern from floor to ceiling. The secondary facades feature recessed vertical plaster panels punctuated by square windows. The north façade features mosaic tiles rather than plaster. These panels extend from foundation to frieze. A secondary entry on the west façade features a canopy supported by round columns and a small aluminum storefront system.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The building permits for this area are unavailable.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

City building permit #GG2370, 2/13/1962. Karl Nicoloff, architect; C. Rallo CC, contractor. "Warehouse and offices."

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This property features a two-story rectangular building with a projecting center bay. On the main façade, at the center of the projecting bay, ribbon windows flank the further projected entry at both levels. The windows on all facades feature a cast-concrete projecting enframement to form awnings for both the first and second level windows. The entry bay itself projects from the building slightly then recedes back with concrete cladding. The recessed area features double height glazing with aluminum framing, double doors, and a cloth awning over only the doors. The majority of the building is used as a warehouse and has little fenestration but for periodic garage doors.

St Louis building permit EE5914, 11/28/1960: "Meeting hall for the Iron Workers & Heavy Haulers Local 396." Karl Nicoloff of C. Rallo, architect; C. Rallo CC, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Iron Workers Local 396 Union Hall building is a rectangular single-story building. The front façade has a center bay of cast concrete panels and is asymmetrically placed. The entry is flanked by line of bronze framed ribbon windows and projecting canopy. The various side and rear windows have been replaced. The side entry facing the parking lot is protected by two brick projections with dispersed glass blocks embedded within supporting a small metal canopy. The entire building is wrapped in a simple concrete cornice with metal coping.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This building, currently housing the Painters District Council Headquarters, is a rectangular two-story building with concrete foundations, brick veneer and a flat roof. It features a central entrance framed with cast concrete panels which project slightly above the roofline and a small metal canopy. The main façade has punched window openings and a storefront system between the concrete panels below the canopy. The north façade features ribbon windows as well as punched windows on the second level and clerestory windows on the first. A belt course of stone visually denotes the first and second floors on all facades.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The congregation of the St. Philip's Evangelical Lutheran Church had discussed leaving the area but chose to stay and built this new church in 1966; by the 1990s it housed the largest Lutheran congregation in the St. Louis African American community. It is significant both as a resource contributing to the heritage of the St. Louis African-American community and for its architectural design. The church exhibits some characteristics of Brutalism, with its massive, solid masonry walls with narrow slot openings. The architect was Francis John "Frank" McGuire whose obituary states "Mr. McGuire served an architectural apprenticeship in the late 1940s. He became a self-employed architect who designed commercial and residential facilities from the time he was licensed in the 1950s until his retirement in the mid-'80s, around the time he became the mayor of Manchester. Much of his architectural work was done through his affiliation with Don Breckenridge, the hotel developer."

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The St. Philip's Lutheran Church is a rectangular double-height single story building with a vertical emphasis. It has concrete foundations, brick cladding, and a flat roof. The art glass windows are all vertically oriented and are sandwiched between two projections of brick which run the full height of the façade and project above the roofline slightly. The windows are oblong in shape with plaster making up the remainder of each vertical opening. The main entrance also projects from the building and features the same window type in repetition. The doors are recessed slightly as the windows above create an overhang.

City building permit #A9018, 1/8/1957. A.F. & A Stauder, architects; John B. Gutmann (Gutemann) CC, contractor. "1 and 3 story school and convent of steel and brick."

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This rectangular three-story building was constructed as a private Catholic school. It has two wings and a central entrance, ribbon windows running the length of the façade at each level, and a projecting glass pre-cast panel entry with a concrete slab overhang. The west wing features vertical slit leaded windows, depicting etched religious scenes.

4949-69 BARNES HOSPITAL PLAZA

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

In May 1966, Barnes Hospital announced the construction of a new "Center Pavilion" to take the place of its original hospital building erected in 1913. The Center Pavilion would house administrative and documentation operations, among other functions.The first image of the building was for a structure notably shorter than the adjacent Queeny Tower; it was built in two stages and floors were added.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Barnes Hospital Pavilion, by Kenneth E. Wischmeyer & Partners, is a rectangular multi-story structure with a flat roof. The steel structure features concrete foundations, brick cladding, historic windows and a full length 2-story portico on the south and west façades. The Pavilion was constructed in stages. The eastern portion was built first, in 1971-72. It was 12 floors originally, with another 6 floors added later. The west half of building (address 4969 Barnes Hosp. Plaza) was constructed in 1978. The south façade features multi-level projecting bays of windows beginning above the portico. The bottom two floors on this façade are recessed and the upper floors rest upon the portico. The top stories project slightly and have a more condensed window pattern than the remainder of the façade.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

Queeny Tower pioneered a new approach to patient care: treating the patient as a person, not merely a bundle of medical needs; and"self-care" facilities. Doctors' offices & exam rooms were on lower floors.The building was more like a hotel than a hospital with its décor, a restaurant on the top floor, and views of Forest Park. A local newspaper called it a "Hospital with a Touch of Mink." The firm of Murphy & Mackey prepared an expansion scheme, later altered, for a $50 million campaign that included a new tower, new front for Barnes Hospital, and adding stories to several buildings. The plan coincided with improvements to adjacent Interstate 64: an exchange at Kingshighway and underground parking between the main Hospital and the Interstate. At completion in 1965, Queeny Tower was the 3rd tallest building in St. Louis, named for Monsanto founder John Queeny, whose son Edgar endowed its construction. The building shows a strong International Style influence in its "machine-like" grid of windows and stripped form clad in limestone and buff brick. The projecting base of the building is influenced by New Formalism.

The firm of Murphy & Mackey (1946-1968), one of the most prolific architectural firms in St. Louis in the Modern Movement, was formed and led by Washington U. professors of architecture Joseph D. Murphy and Eugene Mackey, Jr. Joseph D. Murphy, FAIA (1907-95), a Kansas City native, attended Rockhurst College then the Massachusetts Institute of Technology. He was awarded the Paris Prize in 1929 for his drawings, which enabled him to attend l'Ecole dex Beaux Arts for two years. He returned to Kansas City after Paris, and 6 years later, in 1935, joined the faculty at Washington University's School of Architecture. By 1949, he was named Dean of the School, and held the position until 1952, when he left partner with Eugene Mackey. Murphy & Mackey designed premier structures such as the Olin Library at Washington University (1956-62), the St. Louis Art Museum Auditorium (1956), and the geodesic Climatron at the Missouri Botanical Garden (1960). Through Murphy & Mackey, Joseph Murphy designed diverse buildings both in style and use, many of which gained regional significance and publication in architectural journals and magazines.

Queeny Tower, part of Barnes Jewish Hospital, was designed by Murphy & Mackey. The 19-story tower rises above the portico that extends to the adjacent Pavilion building. The levels below the portico are vehicular parking. The steel-framed building has concrete foundations, concrete cladding, a flat roof and a rectangular footprint. There are two different fenestration patterns facing south and west. The west façade has a vertical emphasis with alternating columns of vertical pairs of windows and thick columns of concrete making this façade mostly solid. The east façade has a horizontal emphasis and more glazing, with alternating bands of windows and concrete rows.

City of St Louis building permit GG315, 9/13/1961: "Church in two parts, 89x68 and 44x56"- Engineer noted as Robert MacDermont. Duncan Novak & Osborn, architects; Gamble CC, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Union Memorial United Methodist Church is an irregularly shaped single story building with a hyperbolic parabolic roof form designed by William E. Duncan, Charles Novak Jr., and Harry O. Osborn. The steel structure features coursed ashlar, concrete foundations, and large stained glass windows. Each window reaches from foundation to roofline and has a rectangle of mosaic tile below. The mullions of the windows are angled upwards echoing the roofline. The main entry is projecting from one façade with a glass vestibule and chevron roof. There are two additional buildings attached to the main structure. One is rectangular in shape and single story with blond brick and mosaic tile cladding with concrete details and historic windows. The other is a long rectangular structure with one rounded end also with concrete foundation, blond brick cladding, mosaic tile elements, and historic slit windows.

City of St Louis building permit G7601 9/6/1973. Builder listed as Bannes-Shaughnessy Inc.

Also McCue, George. The Building Art in St. Louis: Two Centuries, 1981 ed.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Originally Courtney Health Center, this is a single story irregularly shaped building featuring a basement with an access driveway carved into the terrain. The entire building is constructed with running bond brick with a single soldier course below the standing seam metal parapets. Near the edges of the north and south portions of the building the bricks extend through the metal at an angle toward the center of the building and project slightly above the roofline with metal coping. There are two types of windows; narrow vertical rectangles and "upside-down U" windows that consist of a long horizontal portion and two narrow vertical portions dropping from each bottom corner or the horizontal. These vertical portions of the "U" windows are protected by iron gates attached into the bricks.

St. Lucas Evangelical Luther Church. Brick; square plan bell tower has gridded openings at top; vertical slit windows in walls of sanctuary; façade has grid of stone that incorporates cross form. The present property in 1955 and a Building Program begun on the 50th anniversary of the congregation. The present church and educational wing was dedicated on July 27, 1958, at a cost of $300,000.

St. Lucas Evangelical Lutheran Church was founded January 29, 1905, . The first members were 36 Slovak immigrant families. Known for years as the "Slovak" church, only a portion of the present congregation traces its roots to founding members. Regular Slovak services ended in 1985.

City Building permit H197, 4/2/1974. HOK, architect; McCarthy Bros., builder. 22-story bank and office building with underground parking for Boatman's National Bank & Equitable Assurance Society.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Boatmens Tower, designed by Hellmuth, Obata and Kassabaum, is a 22-story steel-structured office building with aluminum cladding, reflective glass curtain wall, a concrete foundation and a flat roof. There is also a lower voume, 2.5 stories in height. The tower itself has a rectangular footprint but with the lower portion the plan is slightly L shaped. The lower portion is set back from the tower façade by approximately 30’ creating a small entry courtyard. The main entry itself, also two stories, is set back approximately 10’ further than the lower portion and is nestled between the two distinctive forms of the building.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This high-rise office building is most well-known for its stark appearance. Designed by Smith+Entzeroth, Inc. Architects+Planners, its square shape encompasses half of a city black and is faced with precast panels of polished black granite aggregate and solar plate glass in anodized aluminum frames. The basement and 2nd-6th floors are open deck parking while the ground floor is public and the rest are office space. The building's ground floor is recessed with the support columns in line with the remainder of the façade.

601 N BROADWAY

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The building is a good example of the New Formalist style of Modern Architecture, with its echoes of a "temple"-like form and beveled window detailing. The building, like Yamasaki's Conference Center at Wayne State in Detroit (1958), exhibits symmetry and formality.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

McCue, George. The Building Art in St. Louis: Two Centuries, 1981 ed.

Also, see 1962 AIA directory for Kassabaum, George. Principal works include "State Employment Security Bldg" 1960: http://communities.aia.org/sites/hdoaa/wiki/American%20Architects%20Directories/1962%20American%20Architects%20Directory/Bowker_1962_K.pdf

City building permit (for 505 Washington Av) #CC7555, 1/15/1959. HOK architects; William Becker, engineer; Murch-Jarvis CC, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Missouri Division of Employment Security Building was constructed in 1959 as the State of Missouri Office Building. This three story building features a rectangular footprint, concrete foundations, limestone cladding, paired fixed windows, and a flat roof. Each bay on both the Broadway and Washington Ave facades features a limestone pilaster supporting a pyramidal capitol that creates mini-vaulting above each window and a deep overhang at each story. The building encompasses a quarter of a city block and shares a party wall with its neighbor. Facing the rear parking lot is a plain concrete façade.
