This multi-purpose facility is a rectangular one-and-a-half story, low gable masonry structure with clerestory windows below the gabled end, and glass block windows below the roofline along the secondary façades. Relief to the masonry is achieved with varying bond patterns. The central entry is delineated with vertical concrete pilasters holding a cantilevered canopy over the glazed double doors.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

New Age Federal Savings and Loan, established in 1916, was a pioneering black business in Missouri and the nation, and remained the only black-owned financial institution in St. Louis into the 1960s. In 1958, New Age moved to a purpose-built bank building at 1401 N. Kingshighway, which the bank boasted was "one of America's most beautiful financial buildings." By providing drive-up banking and several teller windows, an all-black staff, as well as competitive interest rates, the modern New Age facility was evidence of black business success.

See attached Continuation sheet

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

New Age Federal Savings & Loan is a single-story free standing building that features a rectangular plan and concrete foundation. The northwest corner of the building is curved to accommodate a vehicular driveway in its original purpose as a bank. Half of the main façade is random-coursed ashlar while the other half is comprised of floor to ceiling glazing. The entry is recessed at the center of the main façade with a metal awning projecting to the sidewalk line. The south façade is glazed with two bands of windows separated by horizontal siding while the entire back façade is coursed random ashlar. The teller window and deposit box from the building's original use remain intact on the back side.

The David P. Wohl Community Center, designed by Russell, Mullgardt, Schwarz & Van Hoefen, is an irregularly shaped freestanding building on the edge of Sherman Park. The single-story brick entry contains sets of double windows and a long narrow canopy with small square columns. The remainder of the building is three stories in height and is primarily glazed with glass block. Bright color banding - red on the taller portion and blue on the single story- link the entry with the main building. Sliding glass wall panels allow for fresh air during warm weather.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The Tandy Medical Cetner at 3737 N. Kingshighway was the culmination of the work of a group of black physicians and dentists, including founding member Dr. E.B. Williams. The office building housed medical and dental suites, the DeVille pharmacy, Northside Laboratores and a radiological department.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

"New Tandy Medical Center Dedicated on January 23." St. Louis Construction News, February 1966, 1.

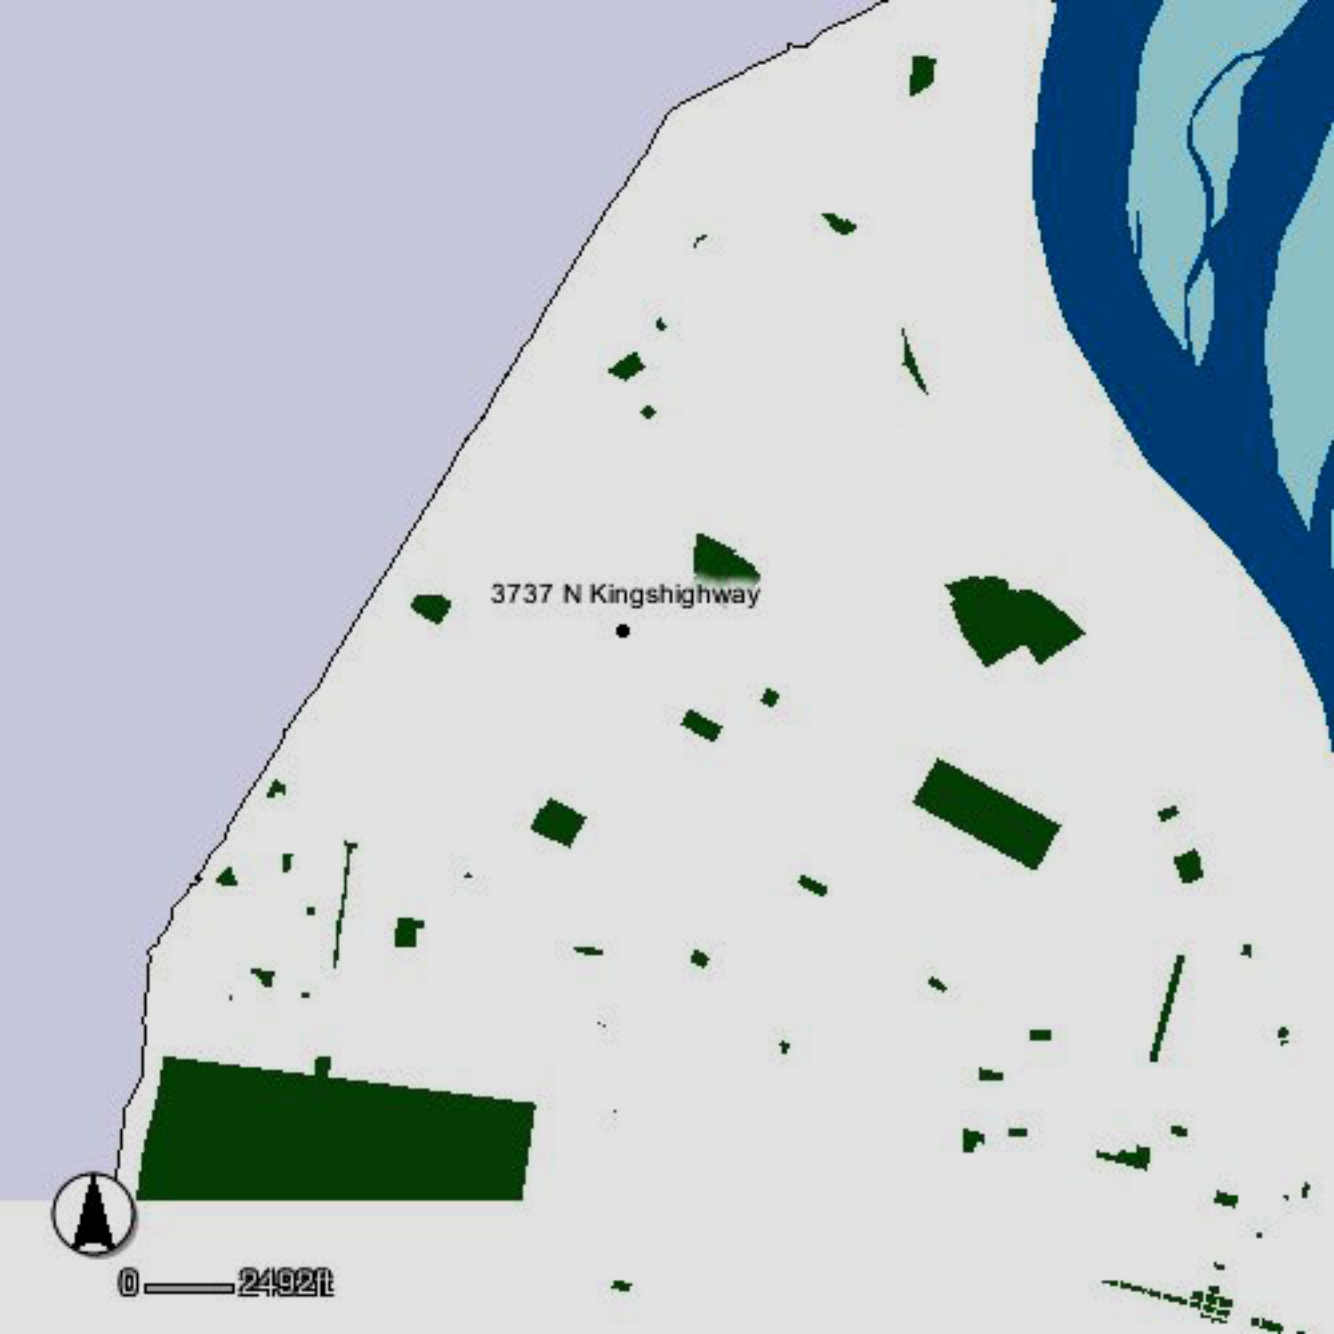

City building permit #B5951, 10/5/1964. "Erect 1 brick building, $215,000. Owner Margaret Goltschaman. Also, C#1395, 8/16/1965. "Occupy building." Deville Pharmacy Inc.

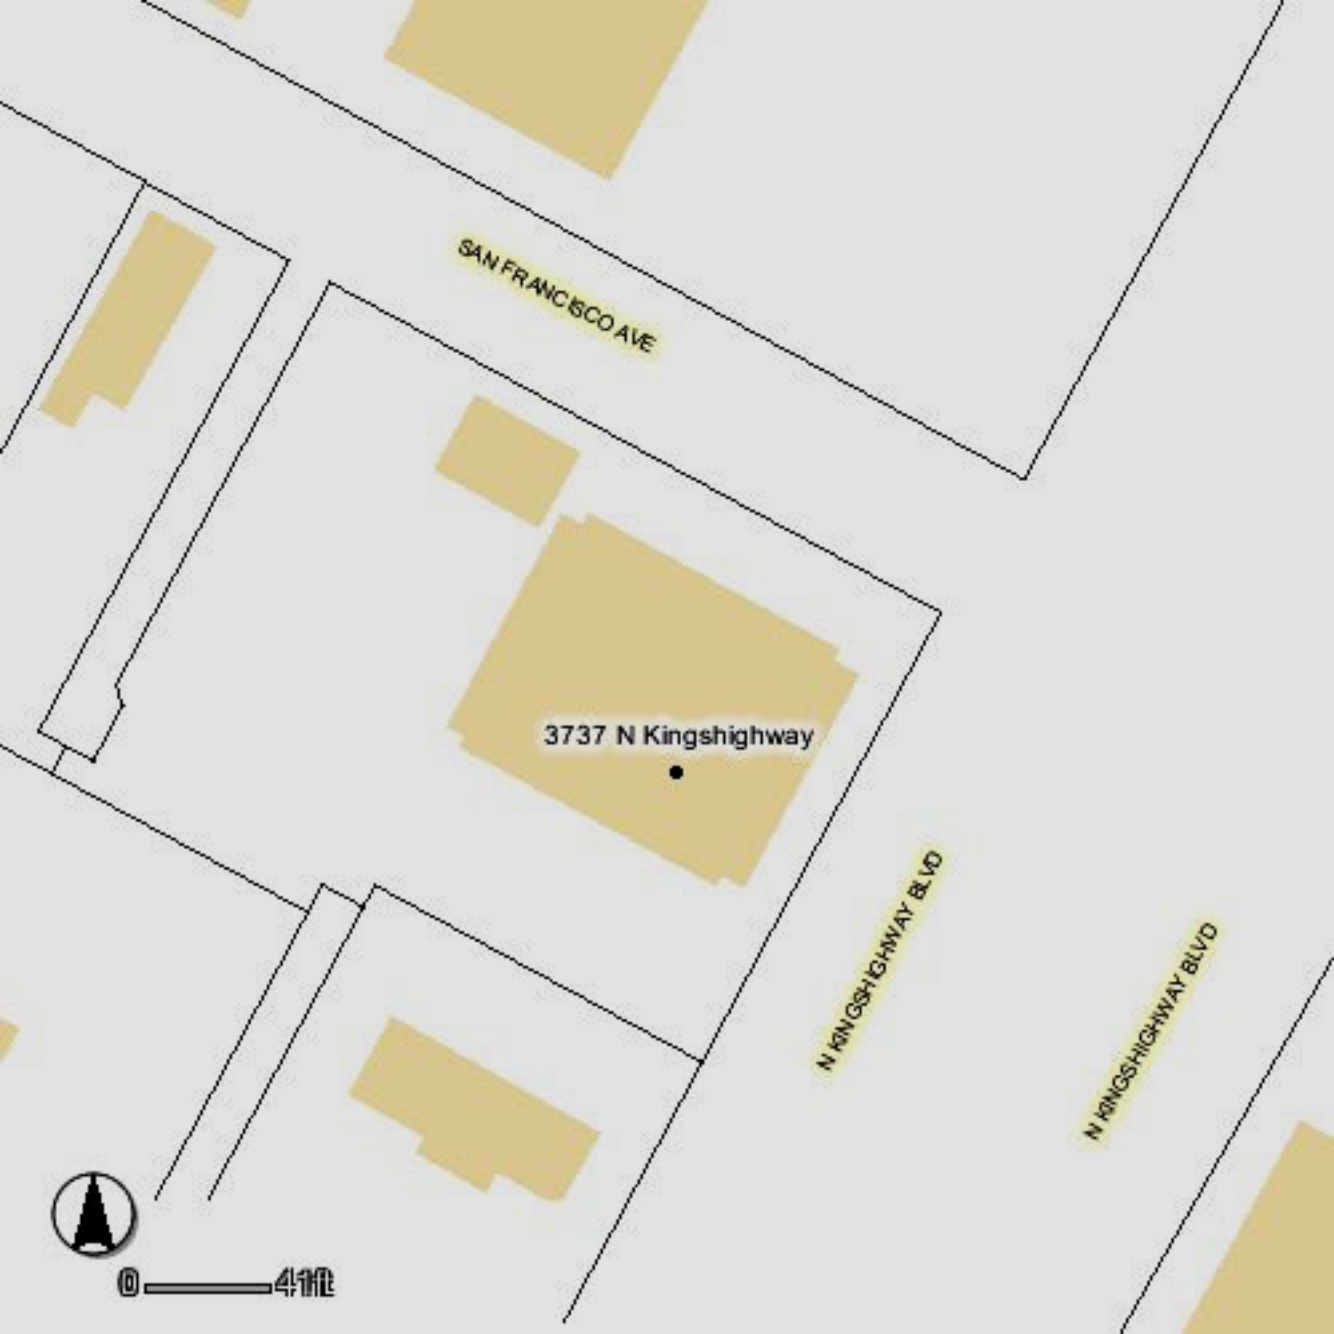

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

An older building, constructed in 1900 is located on the same site; it has been renovated with a new front façade and is now an office.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Three story medical building of stacked tan brick features slot windows symmetrically arranged across all facades and a three-story glazed entry bay flanked by projecting brick pilasters. The flat roof with projecting eaves is flashed with copper capping. A caduseus in tile is set to the north of the entry. The interior has a prominent lobby featuring a large chandelier by Emil Frei.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Carousel Motel is a collection of three rectangular one and two-story buildings around a rectangular courtyard. Each building features exposed concrete structural systems, white brick cladding, open balconies,and flat roofs. Bays of decorative concrete blocks are inlayed in projecting bays on the single story street façade creatimg small parapets. Many of the windows have been replaced or altered. Originally, the motel had 60 guest rooms, and was only one story.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This diner and drive-in is a single-story rectangular building with large bays of aluminum framed windows wrapping from the primary to secondary façades. The flat over-hung roof portion faces the street and entry, with a nearly flat open carport extending behind the building towards the west and supported on thin, angled metal columns. A large roof-mounted rectangular sign reads "Courtesy Diner."

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

In September 1944, the Institute of Geophysical Technology was founded at St Louis University, under the direction of a geophysicist, Father Macelwane. He served as the Dean, while Father Blum was the Assistant Dean. In 1946, the Institute was renamed the Institute of Technology to reflect the expanding scope and interest in engineering, along with the attendant increase in enrollment.The Institute of Technology moved to the new Macelwane complex in 1965. Renderings of the complex by James Fischer Jr., including a taller Macelwane hall, are found in the SLU magazine of April, 1962.

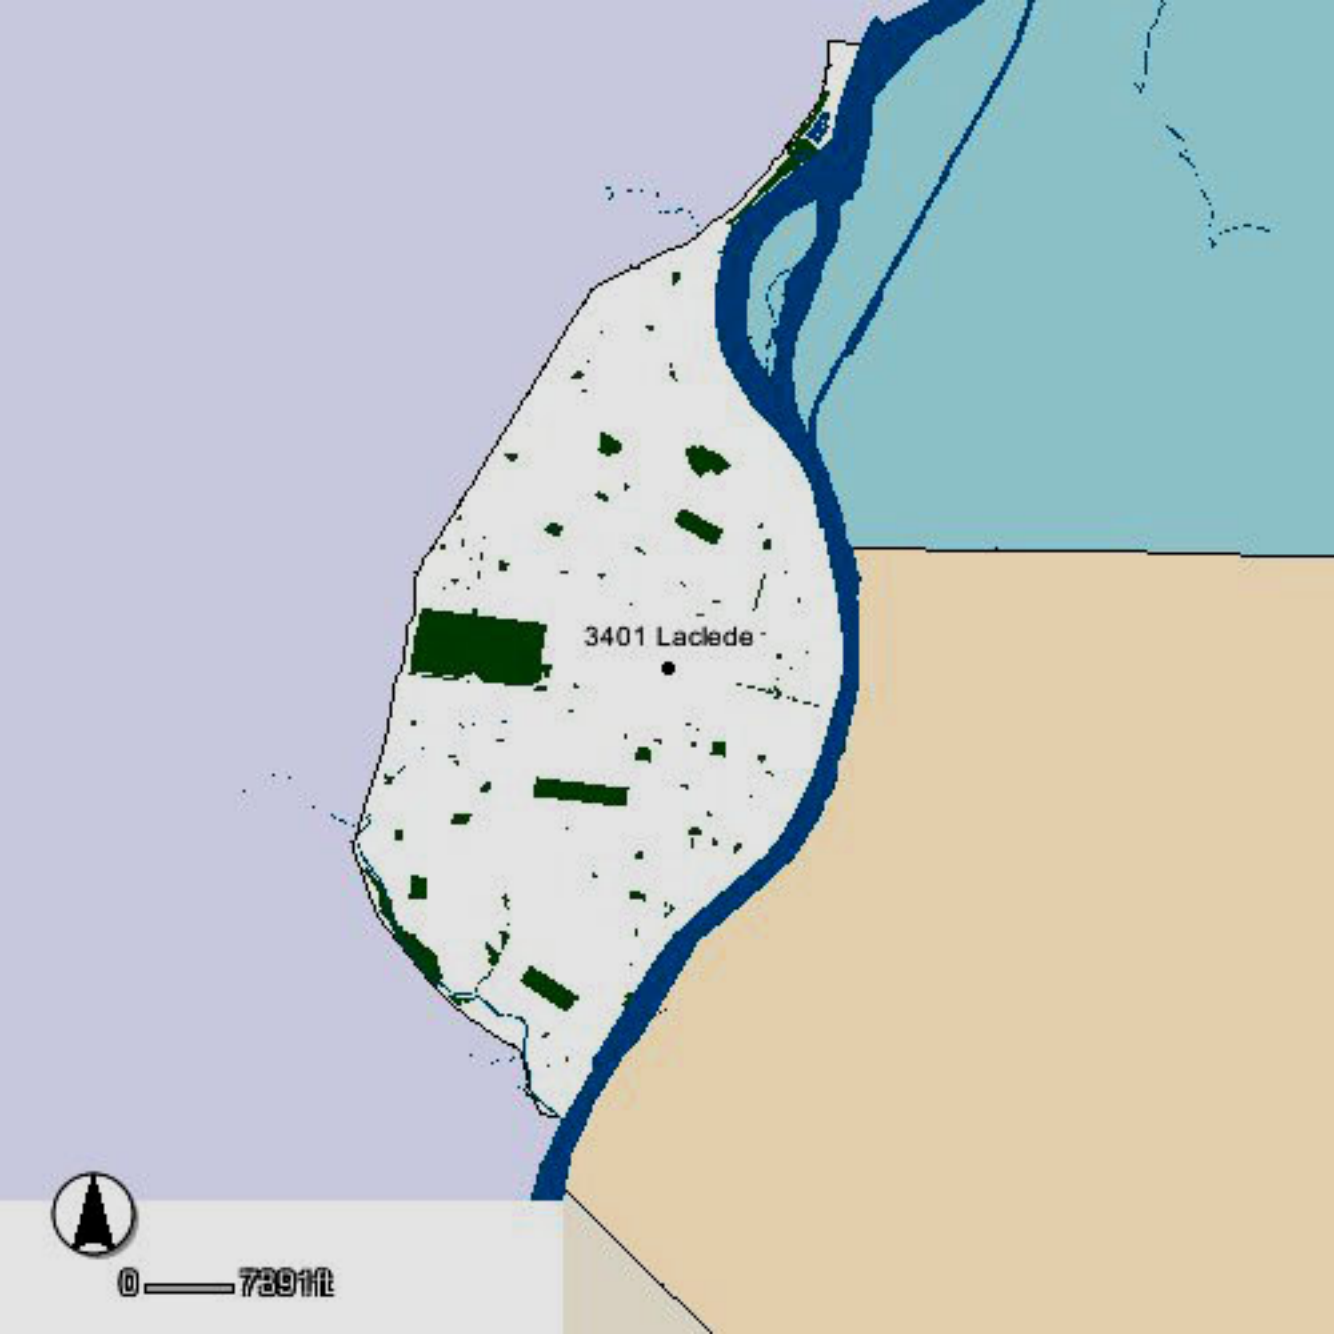

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

Saint Louis University Magazine, April 1962, "The Shape of Things to Come." Also Institute of Science & Technology (as the complex was initially called) alumni website: http://www.slu.edu/alumni/it/history.html. Also, City building permit, 1965.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Part of the St Louis University campus, this cluster of four roughly rectangular buildings surrounds an open court. The small single-story glass building to the west serves as a pavilion entrance to underground areas beneath the court and buildings. The north building is two stories, the south building is three stories and the east building is first story to the south and two stories to the north with a three story tower at the middle. All four buildings share the same exposed aggregated panels, ribbon windows, and metal spandrel paned storefront system. The overall design aesthetic is spare and utilitarian.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This warehouse building, currently housing United Automotive Products, Inc, is a "daylight factory" style industrial building with alternating horizontal bands of windows and masonry wrapping the corner on each level. The entrance bay is emphasized vertically on the main façade with a single two-story glass block window flanked by sidelights. A small metal canopy projects slightly from the façade creating a recessed entry.

Hellmuth, Yamasaki & Leinweber, 1957. Edgarda Contini & William C.E. Becker, structural engineers. 4th vault: Hellmuth, Obata & Kassabaum, 1965; International Wing, 1976. Concourse expansion, Berger-Field, 1978. Control tower: Airport Engineering Staff, 1979. Main terminal expansion, Sverdrup & Parcel and Associates, 1981.

The building presents four tall glazed parabolic arches on the north and south facades, and single identical spans on the east and west. Initially the concourse was placed under three groined shells formed by intersections of paired vaults, and was 32 feet high and 120 feet in span. In addition to the glazed arches, the interior is lit with large skylights set in the junctures of each vault. A fourth vault was added at the south end in 1965. Later a parking garage and access drives were added to the southwest side of the terminal and additions and concourses for passenger gates were constructed from both ends of the main terminal and from its center towards the runways.

City Building Permit #E4266, 5/26/1969. No architect stated. John Kalicak Construction, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Fire Station 7 building is a rectangular single-story building with a recessed middle bay containing the fire engine parking bay. The reinforced concrete structure has concrete and brick cladding and a mainly flat roof. The middle section has a folded roof design with clerestory windows and three vehicular openings below. The side wings, as well as the side and rear facades, have slightly recessed blond stacked bond brick window bays and a wide concrete cornice. The windows within these recessed bays are aluminum framed and operable. Between each window is a row of red brick headers running from foundation to cornice.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The first publication to note St. Louis post-war buildings, the AIA St. Louis Chapter's Architectural Guide '55 (1955) noted three recent church buildings in St. Louis City: the Bible Chapel; Resurrection Church (a City Landmark) and St. Mark's Episcopal Church (also a Landmark). This recognition suggests that this building was an admired early example of modernized church design.

See attached Continuation sheet.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

NiNi Harris, Holly Hills (St Louis: Ready Pres, 2010).

Also "Bible Chapel: History" found online at http://www.biblechapelstl.org/history2.html.

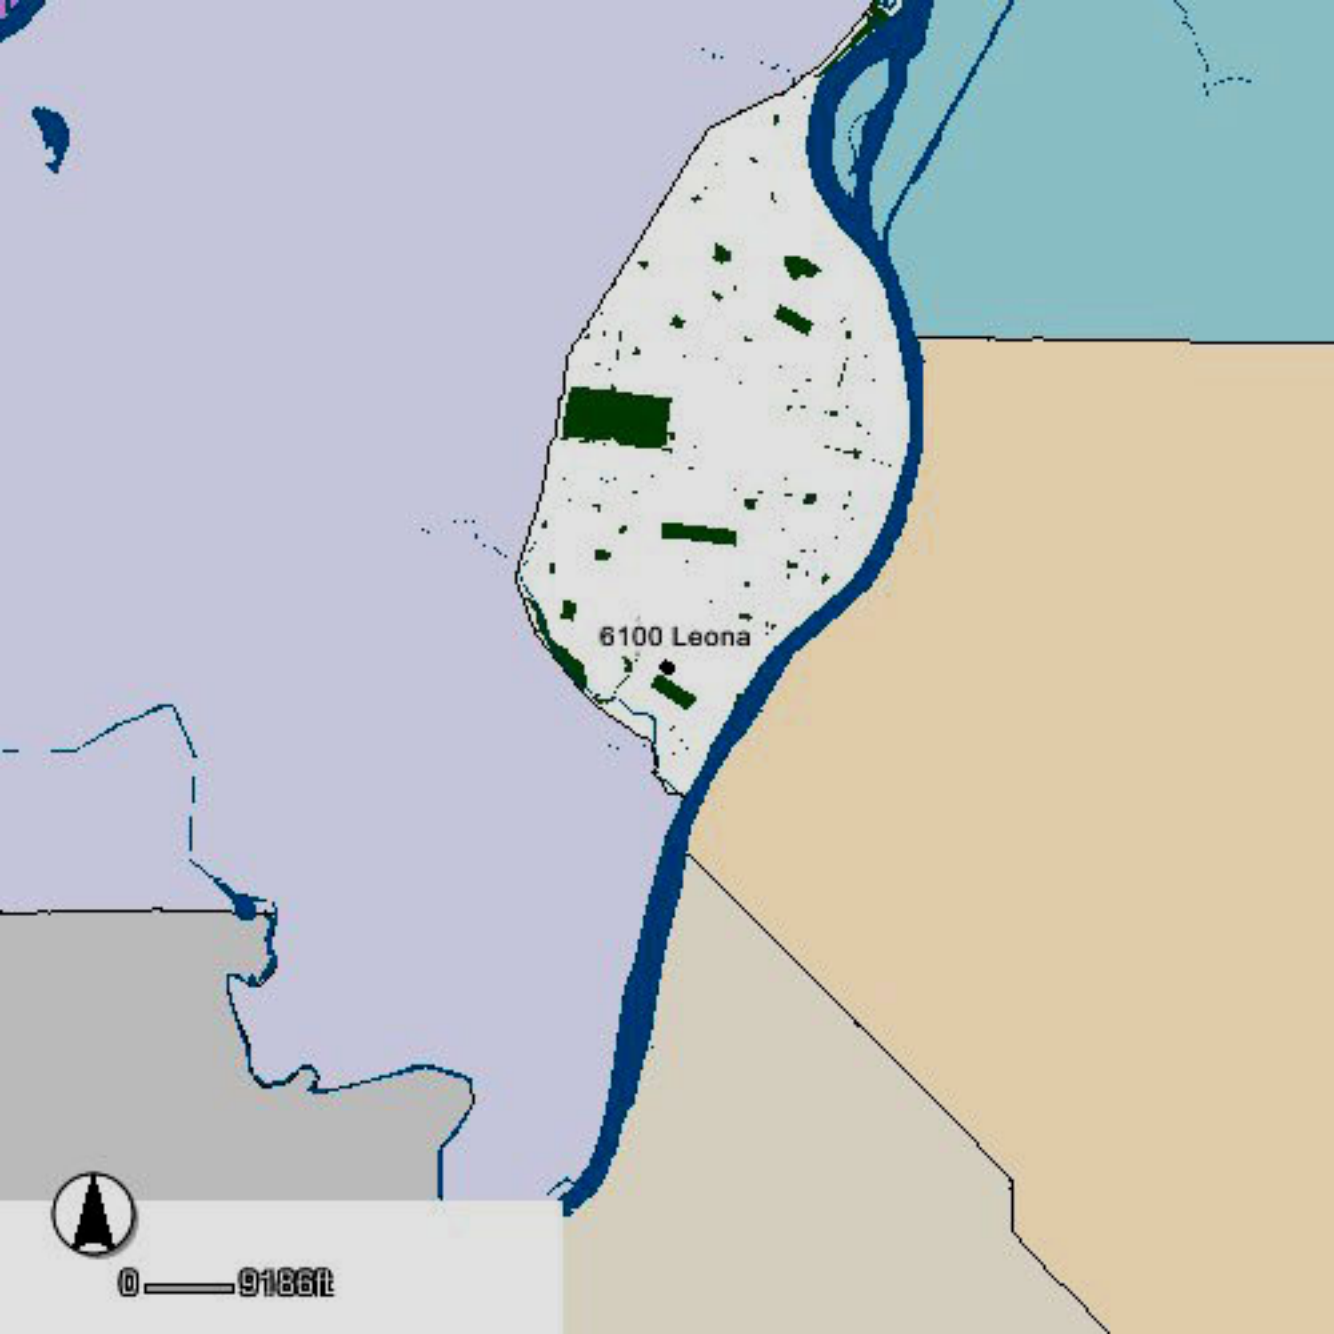

Also listed in St Louis Chapter AIA, "Architectural Guide '55 St. Louis." [names architect as Erwin Carl Schmidt].

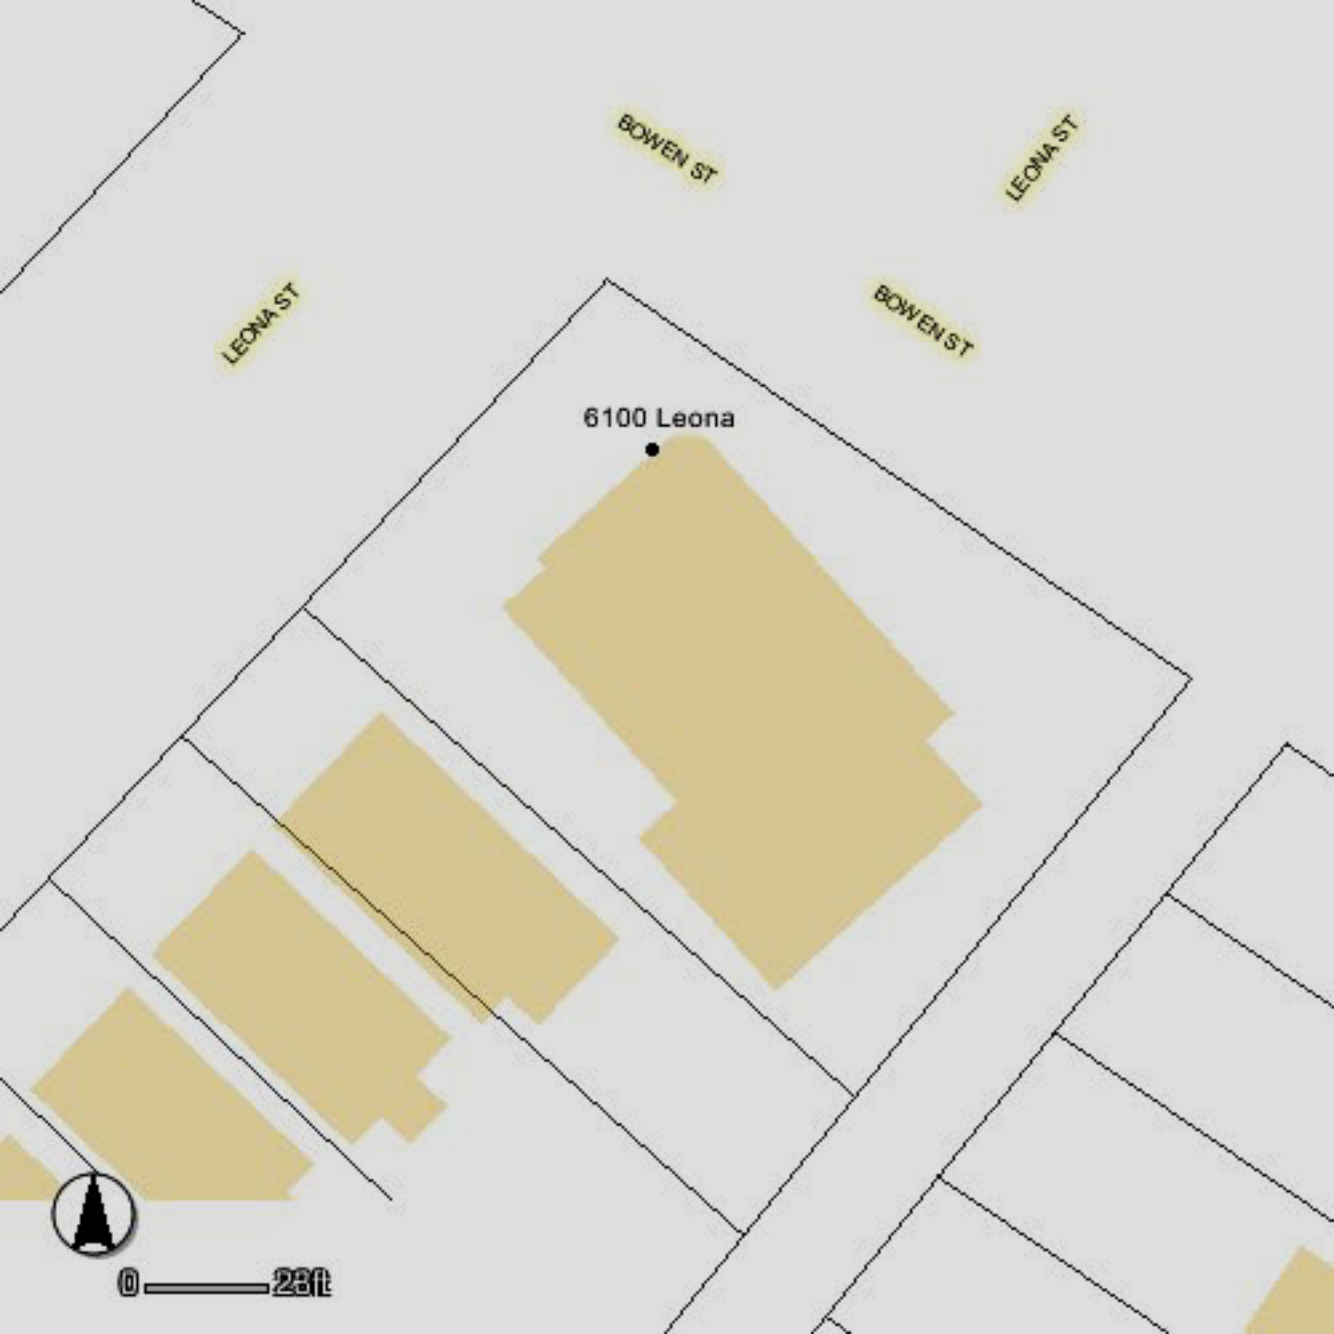

City building permit #S1986, 8/25/1952. Schimdt & Krueger, architects; South Side Gospel Hall owner and builder.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Originally built as the South Side Bible Chapel, and now known as the Oak Hill Chapel, this church building is a rectangular plan, single-story structure. It has a gabled roof projecting over a single bay of windows. The entry is recessed under a projected concrete canopy, with an attached brick tower extending above roofline. Along the primary façade is a series of nine glass block windows, continuing along the west façade. The east facade features evenly spaced vertical recessed windows, and a day-lit basement.

ARCHITECTURAL/HISTORIC INVENTORY FORM

3750-60 LINDELL BLVD

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

Research to determine when SLU acquired this building is needed. The University named the building the ITT Building until 1992 (?). At that time, McGannon Hall was named for Chancellor J. Barry Mcgannon, who was an administrator at SLU from 1957 until he died in 2000.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

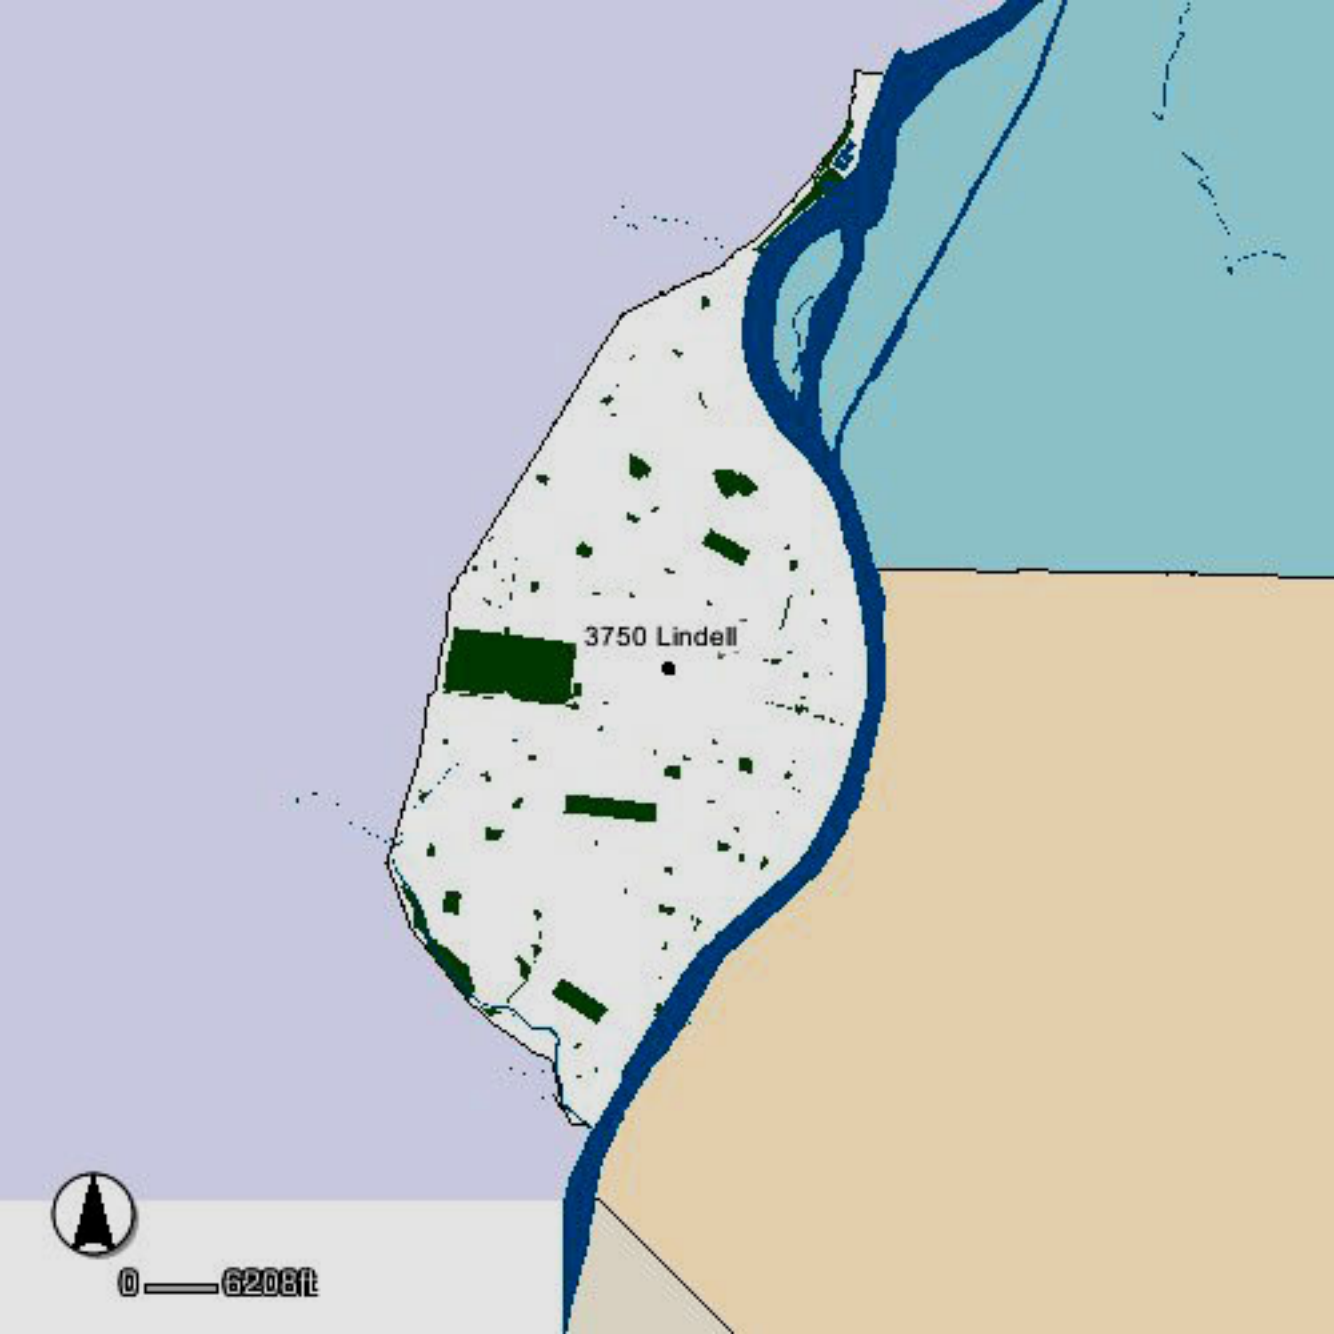

SLU Alumni magazine, "Universitas," winter/spring 2001: http://www.slu.edu/Documents/universitas/utas_winter_01.pdf.

City of St Louis Building permit #A3640 for design and construction of 2-story (+bsmt) Office and 1-story Garage, 8/4/1955. The Austin Company, architect and builder.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

McGannon Hall is a rectangular 3-story building with a higher corner stair tower/entry on one end. The tower volume has a front panel of marble within a dark stone frame. The primary volume has three rows of square ribbon windows and is faced with concrete tiles. The building houses the SLU College of Public Service.

Listed as Contributing in the National Register-listed St. Louis Midtown Historic District.

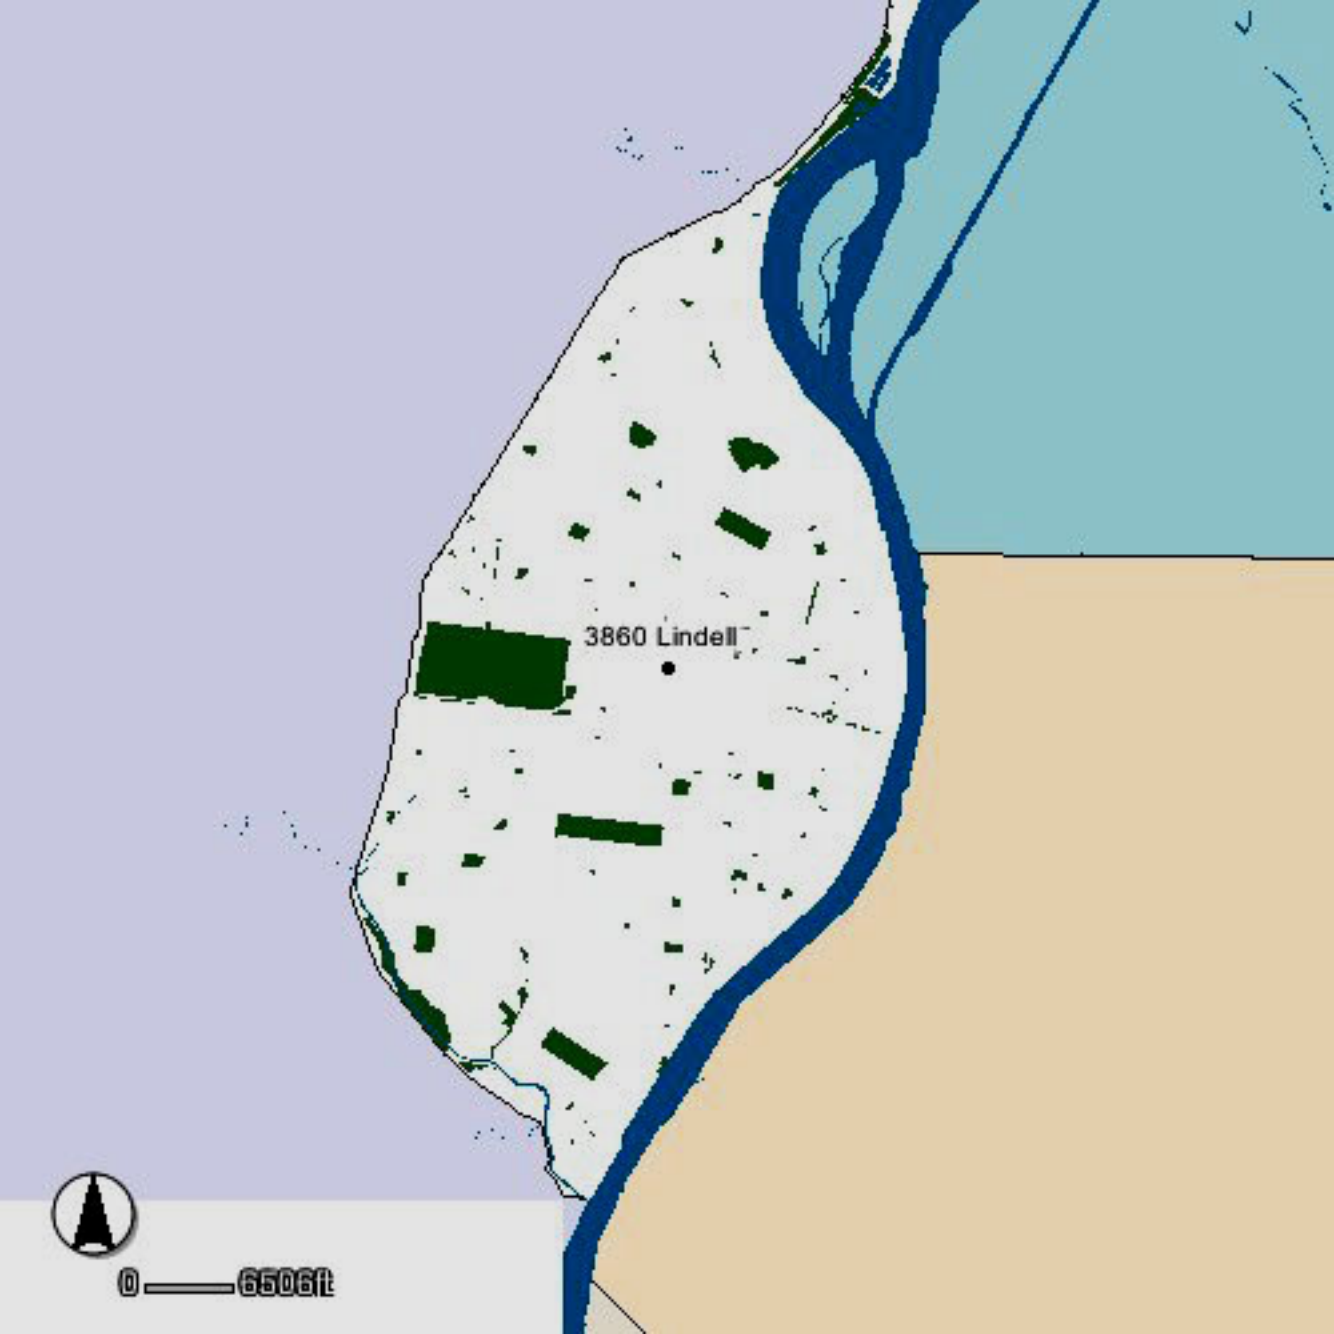

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

No building permits were found for this property.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

A Russian style avant garde entry tower is combined with a streamlined Moderne structure in this simple rectangular two-story commerical building, originally the Brotherhood of Railway, Airline, and Steamship Clerks Hall. The tower projects forward with a double height entry porch supported by two large stone columns has a partial third story above. The north and west façades of the tower have carved stone ornamental emblems and small square windows. The south façade of the tower features a vertical slit window of glass blocks and the entry is framed with concrete with an art deco figure carved above the door. The building has repetitive punched openings on both floors.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The City's first Playboy Club was noted as "ready to open" in October 1962. Construction New touted that the building cost $1,000,000 and was described as "lavish." Its décor featured a unique "playpen" living room. The Playmate Bar had a color scheme of burnt orange and black to complement sap-streaked walnut paneling. Building Permit, issued 1/29/1962 was for $345,000.

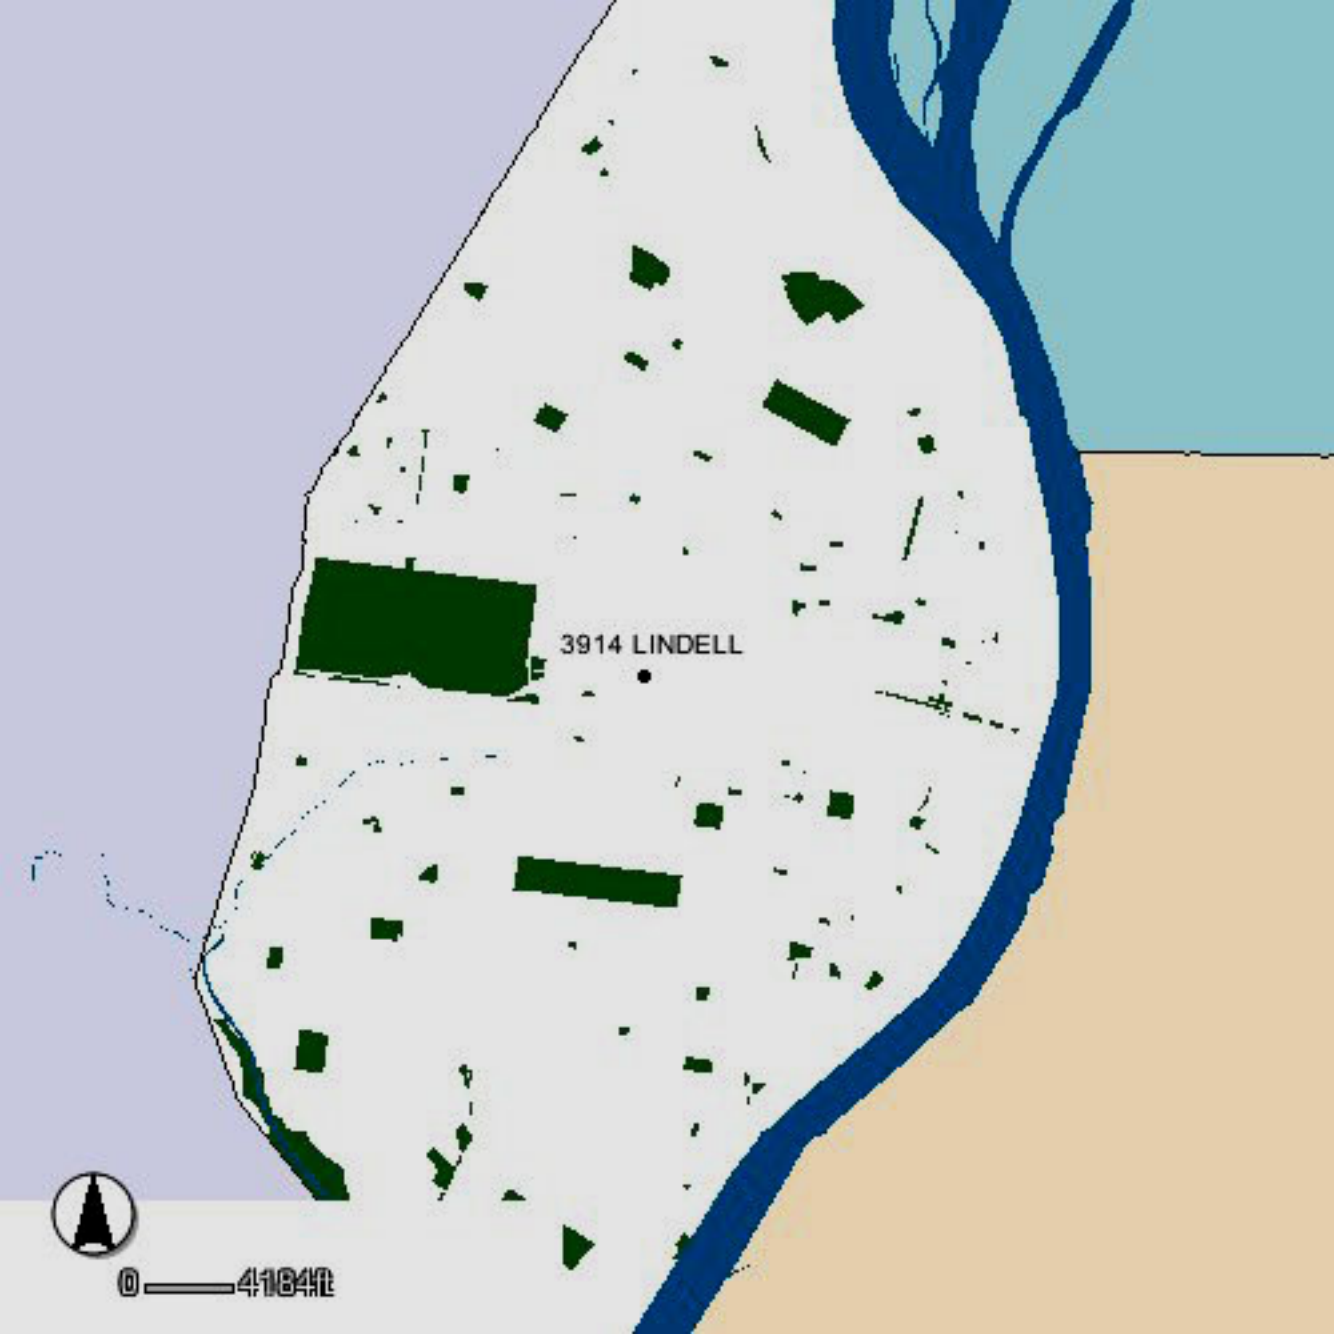

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

Weiss, Toby and Allen, Michael: "Lindell Boulevard: St. Louis' Modernism Corridor" Modern STL Website, accessed October 5, 2011.
St. Louis Construction Record, October 1962, p.1
Building Permit GG2203, 1/9/1962 for $345,000.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The2-story building, constructed as a restaurant club, is set back in from the street to a building line likely established by earlier residential buildings. The two-story façade, with dark glass on the first story and dark-colored concrete panels on the second story, is divided into thirds by narrow black posts that terminate just above the roofline. A series of narrow muntins also extend the full height of the façade. The eastern portion of the bay is recessed and is approached by a driveway; vehicular doors in the façade and rear wall document the drive-through portion of the building. A distinctive canopy covers the access sidewalk, which is beside the driveway. Steel posts supporting cross beams and the front portion cantilevers toward the public sidewalk. A series of pyramidal forms comprise the roof of the canopy. Distinctive interior spaces featured walnut paneling and there was a "Saarinen" style cantilevered staircase to second floor.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The Automobile Club of Missouri occupied the Columbia Club building at 3915-17 Lindell Boulevard from 1938 until the building burned in 1975. The Auto Club announced in June 1975 that it would erect a new building on the midtown site and presented to the public a model of the new building, designed by Sarmiento Architects, in March 1976.

See attached continuation sheet.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

St Louis building permit H9361, 5/11/1976. Walter Riley listed as engineer.

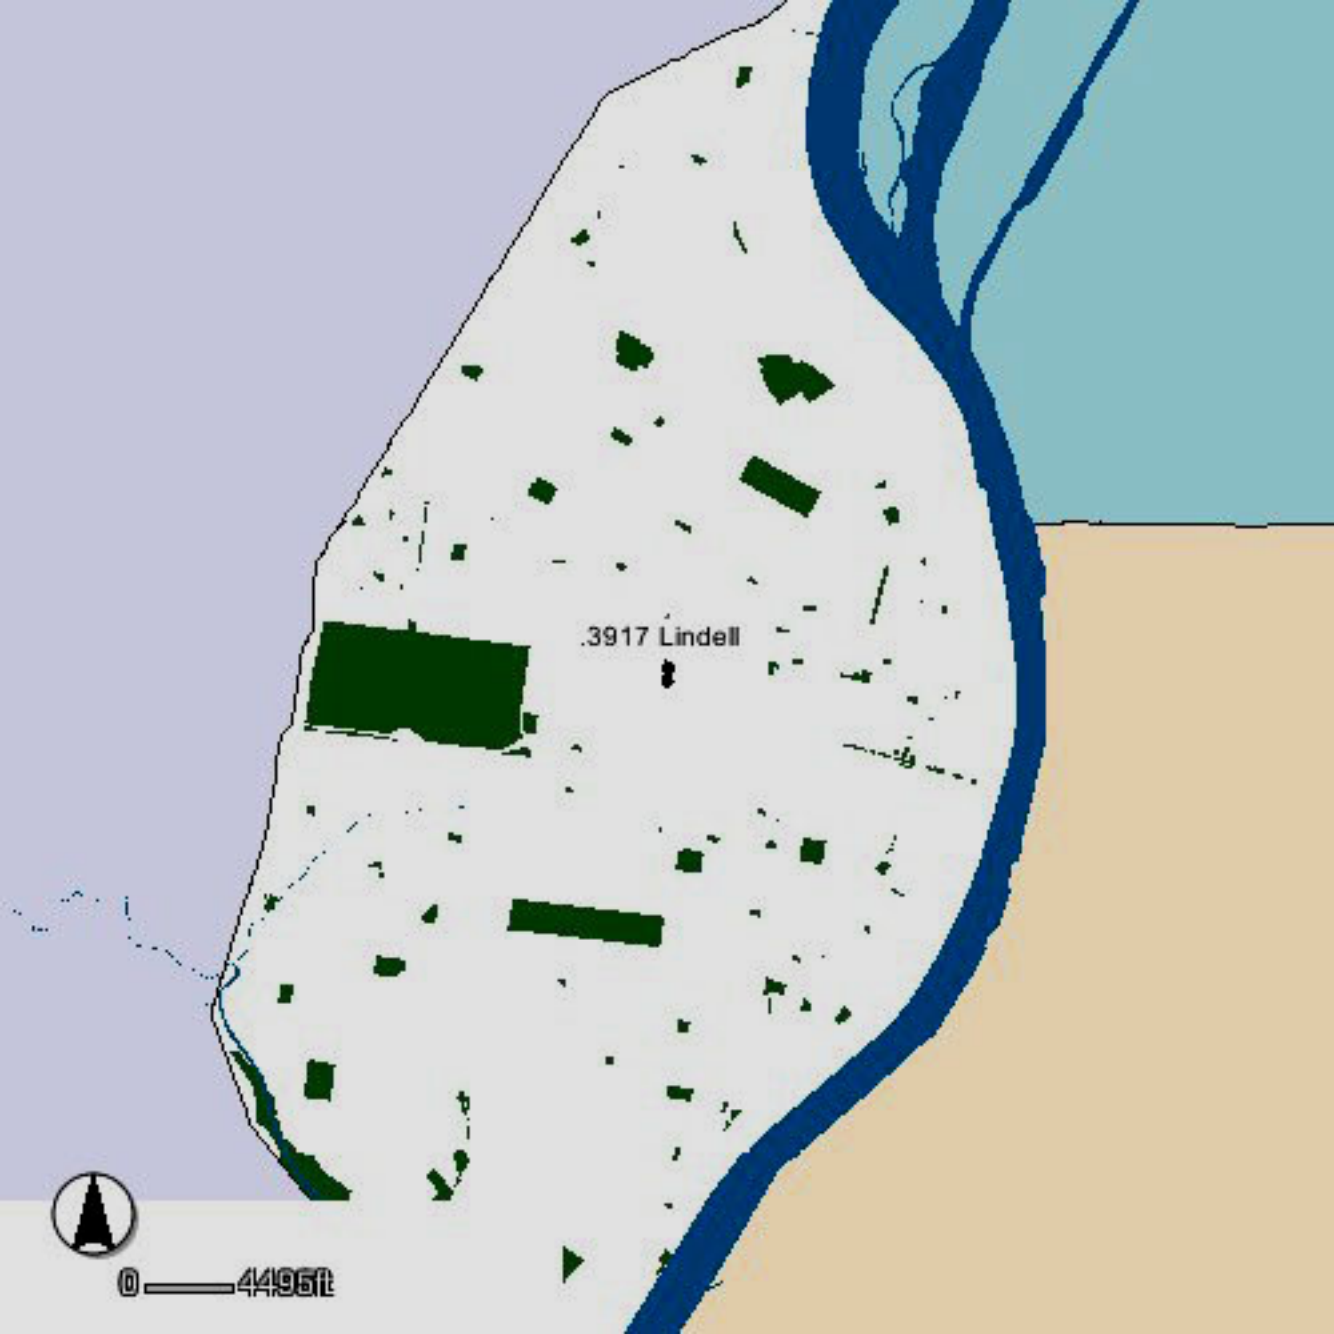

Also Sarmiento interview accessed online: http://www.landmarks-stl.org/news/conversation_with_wence_sarmiento_architect_of_the_aaa/

St. Louis Globe-Democrat clipping files collection, St Louis Mercantile Library, including: "Auto Club to Build on Its Old Site." Glove-Democrat, 6 June 1975; and "Atuo Club to Build on Midtown Site." Globe-Democrat, 3 March 1976.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This architecturally significant building by Sarmiento Architects was built for the Auto Club of St. Louis and has an oval footprint. It features tapered concrete colonades of thin rectangular base columns supporting the concrete roof slab, which supports the weight of the glass curtain wall. The reflective glass curtain wall rises from ground to roof, emphasizing the structural system. The oval form imparts a feeling of motion.

City of St. Louis Building Permit A7041, 6/4/56: "Office building for Sperry Rand Corp." HOK, architect; Builder SP Shakofsky.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Remington Rand Building is a three story rectangular building with window walls above low brick curb walls at each story. Each level's façade is inset from exterior structure consisting of vertical metal poles and horizontal plates which create awnings for the story below. The street level façade features floor to ceiling windows between the exposed concrete frames. The entire building features concrete foundations, plaster cladding, aluminum historic curtainwall windows, and a flat roof. The west façade features three circulation blocks which project above the roofline and the entire building has white coping.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Engineers' Club of St Louis building was designed by Russell, Mullgardt, Schwarz, and Van Hoefen. It has a double-height triangular portion to the west, joined to a rectangular one-story volume ending in a zigzag eastern wall. The building has brick and slate cladding, a flat roof, and steel accents. The main bar of the building features recessed bays separated by triangular brick pilasters. Each bay includes a small metal canopy, floor to ceiling storefront windows, and a stone fascia slab. The double height portion has brickwork on the main façades, with slate tiles infilling the missing triangle corners. Metal coping continues the triangle’s points and angles slightly up toward each corner.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The Chancery of the Archdiocese of St. Louis building was designed by the Bank Building and Equipment Corporation of America (under lead designer W. A. Sarmiento). The main entry features double height windows, and the central skylight has striking concrete "tracery." Stylistically, the building exhibits a slight "futuristic" expressionistic influence seen in the playful column shapes and decorative screen of metal banding. Sarmiento accepted a position with the Bank Building & Equipment Corporation in 1952, and led the design and collaboration of many influential Modern buildings both locally in St. Louis and in other locations. From 1952 through 1964, Sarmiento led the design direction at the Bank Building & Equipment Corporation, then left after J.B. Gander's death and formed his own company. W.A. Sarmiento Architects expanded to included offices in St. Louis, Phoenix, and San Francisco. Sarmiento closed his practice in 1978.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Catholic Chancery building is round in plan, with a domed roof and modeled two-story concrete supports in front of a plate glass two-story wall. The building has a steel structure with concrete foundations. The building's foundations are faced with coursed stone and the projecting roof is supported by columns which curve in to attach at the concrete band between the two levels. This band is punctuated by the brass mullions of the floor to ceiling windows that occur at both levels as well as adorned with decorative brass panels. The main entry features double height windows and double doors framed in brass.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The Optimist International organization had maintained its headqurters in St. Louis since 1923. After an exhaustive study of alternative locations, the Optimists decided to construct a new headquarters in St.Louis, based on the city's central location, good transportation and excellent hotels and facilities for annual meetings. At that time, Optimist Internationtal, whose slogan "Friend of the Boy" summed up its work, had 70,000 members in 1,800 clubs. The organization selected Schwartz & Van Hoefen to design a two-story building on Lindell Avenue. The addition to the headquarters, constructed in 1979 on the original building's parking lot, represents a significant growth in the organization, which then had 120,000 members in nearly 3,400 service clubs.

See attached Continuation sheet

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

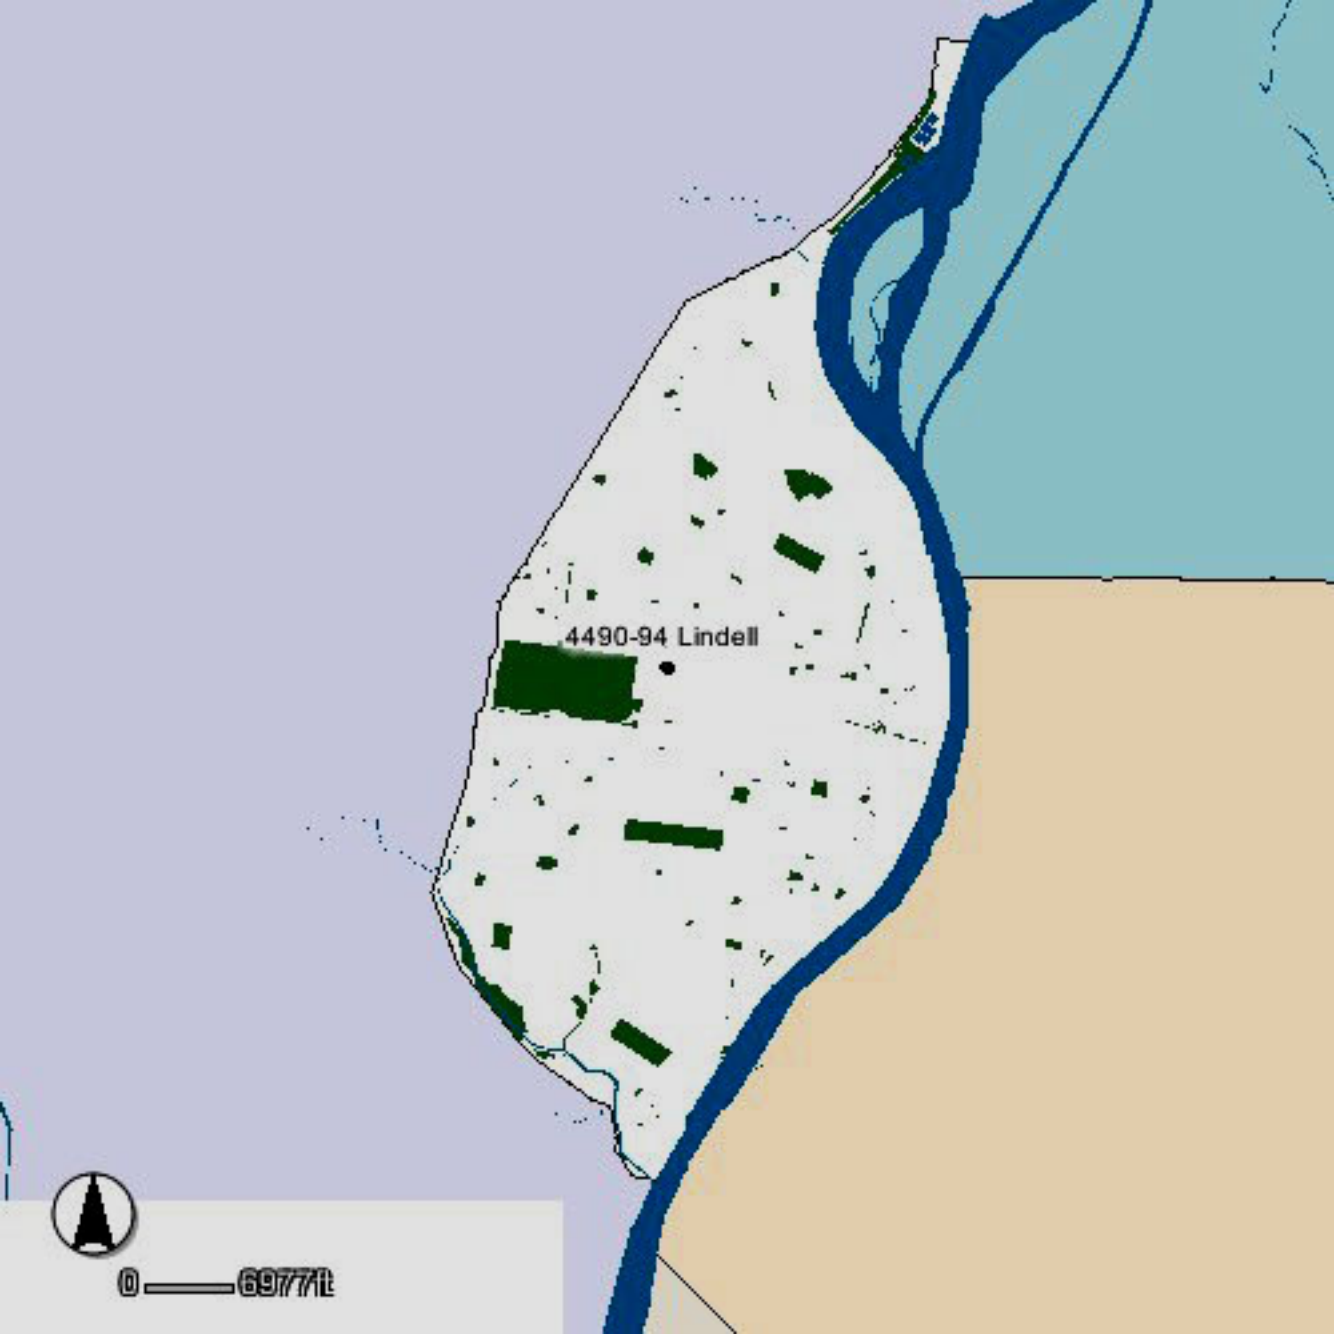

No permit for the first structure has been found. The second City building permit to the addition is dated 12/9/1977. No architect listed, but builder is Woermann Const.

"Optimists to Build $1 Miillion Addition." West End World; St. Louis Commerce, March 1960, 26-27.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Optimist International building is a two- and three-storied tall rectangular structure with exposed concrete, stone cladding, and curtain wall windows. The two-story portion was constructed first, in 1962, and the taller addition in 1978. Both exterior enclosures have an aluminum storefront entry and masonry veneer with slit vertical window punched openings. The cantilevered floor slabs are supported by whimsical concrete columns with tapered faces and mirrored so that the wide ends are set against the floor slab.

The Bank of America bank and office building is a rectangular multi-story building featuring floor to ceiling ribbon windows at every level with concrete spandrel panels between floors. A solid vertical concrete shaft occurs off center on both the north and south façade and projects above the roofline. The top level projects outwards slightly and the mid levels carve in at the corners helping to emphasize the larger floor plate. The ground floor and second level are recessed, exposing the structural columns. A cantilevered concrete canopy denotes the main entry and the entire building sits atop an underground parking garage.

1801-27 LUCAS AV

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

St. Nicholas is architecturally significant as one of the works of a prolific and highly-regarded local firm specializing in religious architecture. The design illustrates an arrangement of low, horizontal volumes punctuated by the tower and the primary worship hall, both with distinctive and repeating roof shapes.

The church also has significance in the African American community in St. Louis, due to the fact that it was the first parish in the City to be transferred from a white congregation to an African American one, in 1924. St. Elizabeth's was the only parish available to Catholic African Americans until that time. According to the church website, in 1960 Cardinal Ritter gave permission for the parish to construct a new parish compound, consisting of a Church, School center, Rectory, and Convent.

The reconstruction of St. Nicholas parish adjacent to its original location at 18th and Lucas was announced in early 1960. The project was to include church, school, rectory, convent, and Community Center. The buildings were dedicated in 1962. The project, the first new Catholic Church to be built in downtown for at least 60 years, was to serve a predominantly Black parish; all of the 400 members of the parish lived in the Carr Square Village and Vaughan Apartments. The school would have a capacity of 400 students, a number much larger than the number of students currently enrolled.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The St. Nicholas Parish Center, by A.F. & Arthur Stauder, is a U shaped single story building with two double height portions, a 2-story section and a square tower near the corner of Lucas Ave and N 18th St. The footprint encompasses a church, school, and gym or auditorium, all wrapping around a central parking lot. The middle section is single story with a flat roof and evenly distributed bays of windows and brick. Both double height portions, one at each end of Lucas Ave, feature a waved roof with overhanging eaves, clerestory windows, slit windows, brick cladding, and concrete foundations. The church area (18th) features decorative etched glass in the clerestories and slits with religious depictions as well as voids in the brickwork in the shapes of crosses. The main entry to this portion faces 18th Ave and features a wavy roof portico supported by slim posts. The entire building features a simple cornice and frieze.

City building permit #GG3325, 5/1/1962. H.T. Jarvis, engineer. No architect listed. Murch-Jarvis CC, contractor. "Warehouse and offices."

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The White Castle Headquarters building is a single-story office building with an L shaped footprint, concrete foundations, brick cladding, original vertical fixed windows and a flat roof. The main entry to the building, and focal point, is clad with white ceramic-coated metal panels and is made to look like a White Castle restaurant with crenels and an aluminum awning. There is a brick office addition and a warehouse to the side and rear with loading docks facing Macklind Ave. The north half of the main façade features bays of windows with concrete sills and the entire building has simple stone coping.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This Lutheran Church is a single story building with an irregular plan and flat roof. It was originally constructed as two office buildings and was then altered and connected. Its steel structure has concrete foundations, blond brick cladding, and fixed metal-framed windows. There is a projecting semi-circular glass entry with an angled circular standing seam metal roof and modern stained glass window. Tall narrow windows with metal panels above and below punctuate the façade. There is a two story building connected to the north that has a different aesthetic style but retains the brick exterior with a running bond and four soldier belt courses. This façade features narrow windows at both levels with pairs of brick projections between each window topped with a mental standing seam entablature.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Weissman's Dance and Recreation Supplies building is a single story L-shaped building with a flat metal awning projecting across the façade and interrupted by a projecting random ashlar stone blade wall extending past the roof line. The office section has random ashlar coursed stone up to the window sills with common bond brick above. Horizontal rectangular windows punctuate the façade on either side of the entry; while on the warehouse section smaller rectangular windows line the street façade. Between the office and warehouse sections of the building are two loading doors. The main façade features a short parapet with slim coping.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

City building permit #H7911, 1/9/1954. Kenneth E. Wischmeyer, architect; I. E. Millstone CC, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This two-part building has an office portion that is a single-story roughly rectangular portion with high metal transom windows on the front façade as well as an aluminum and glass corner entry with floor to ceiling windows. Additionally, the building's roof has projecting eaves supported by projecting random-coursed blade stone walls. Each façade of the office features long rows of windows directly under the eaves with a continuous sill, made up of multiples of a large square fixed pane with awning beneath it. The warehouse portion to the west is painted concrete.

Missouri School for the Blind. Original building built in 1906. Several subsequent MCM additions. At many points in the building the second level is cantilevered over the first level and is clad in concrete rather than brick. Metal framed sky-bridges occur often and are supported by slim metal supports. All windows are aluminum framed with either metal or stone sills.

4401 MAGNOLIA AV

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The dedication of the new Garden Clubs' National Headquarters was celebrated at the time of the 1959 St. Louis convention of the organization's more than 400,000 members in 12,894 clubs in the United States and eleven foreign countries. Arhitect Frederick Wallace Dunn, who worked with architect Nolan L. Stinson on the design, stated that the principles of the design - monumentality and function - were conceived within a short time one afternoon as the design was sketched on the proverbial back of an envelope. The building was designed to be a national records center and mailing office, with rooms for board meetings and staff offices. The distinctive garden wall fronting Magnolia was designed by William Talbot, the son of John Talbot, then Vice Chancellor at Washington University. The sculpture was conceived as an integral part of the garden fence and as a feature to be viewed "en passant" as one walked along the sidewalk. The sculpture, of shaped "granite pickets" was designed to produce a changing pattern of light and shadow. A patio, with a circular opening to the sky, featured a locust tree. The materials were Horsehead N.Y. White Rose brick and Salisbury, GA pink granite, with walls of glass in aluminum and walnut woodwork on the interior.

See attached Continuation sheet.

This building, housing the National Garden Clubs Inc, is a rectangular two story building by Frederick Dunn, Nolan Stinson, Jr. and William Talbot. It features concrete foundations, brick cladding, and a flat roof. The building is guarded from view by a brick and concrete wall with a full height carved stone decorative element marking the entrance.

City building permit #R6997, 6/19/1947. Oscar Janseen, architect; Fruin Colnan, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This building, currently housing Shreves Engine Rebuilding, is a red brick and cast concrete warehouse encompassing one square block with three distinct volumes of varying heights. Each volume has a different street appearance. The northeast two-story portion is a warehouse of concrete foundation and brick walls with even bays of windows and is attached to the 194 portion of the complex. The roofline features a parapet with projections at the corners and the second story projects over loading bays, supported by steel columns.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

Constructed as an animal hospital.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

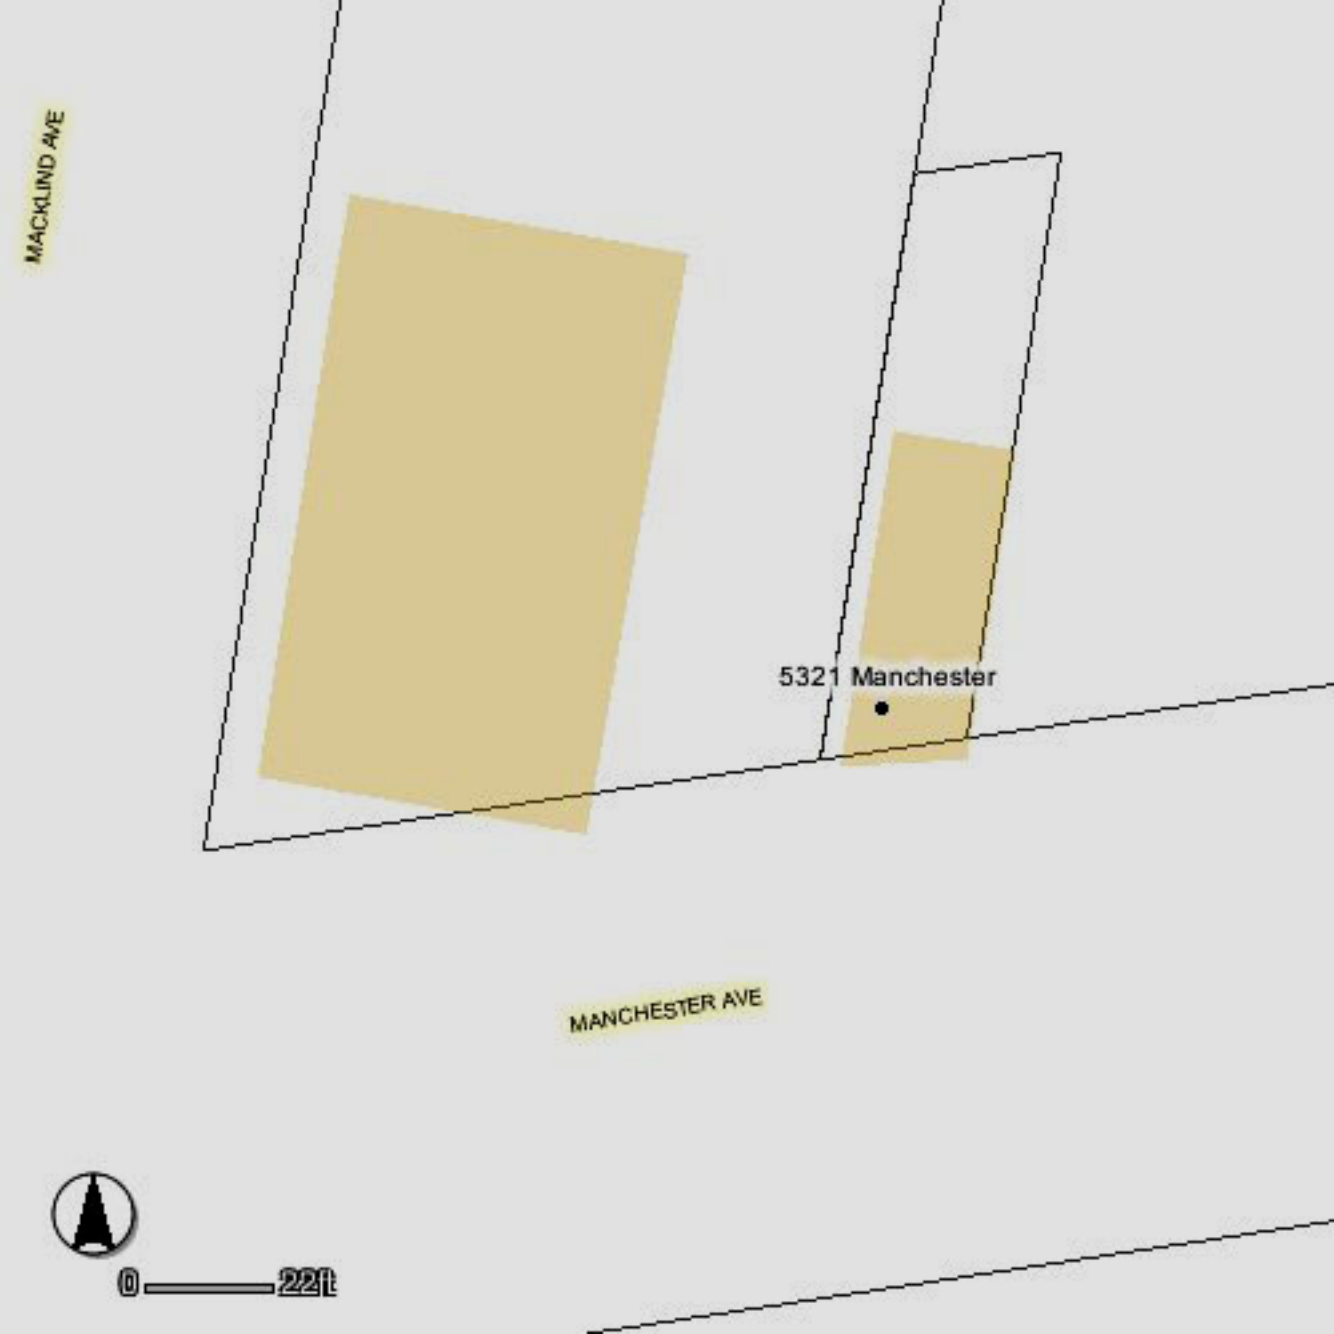

St Louis building permit EE8551, 5/25/1961: "Animal hospital." Bernoudy, Mutrux & Bauer, architects; J. Schiemeler, contractor. Also B1376, 11/20/1963.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This narrow single story concrete block building used as a veterinarian office has concrete foundations, exposed block construction, and a flat roof. The entry is recessed and the porch extends on the west end to match the sidewalk line creating a wedge shaped front "porch" supported by concrete block columns with decorative concrete blocks on the balustrade. The porch features tile flooring and three round pendant lights. The symmetrical entry façade features a center door with transom window flanked by two single pane clerestory windows. There is a small projection off of the east façade. A low concrete planter box sits between the sidewalk and the front of the building.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

No building permits were found for this property.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

A one-story red brick building with what appears to be a newer, Modern styled blond brick façade addition faces Manchester Avenue at an angle. The front addition includes a slightly projecting 5-bay central portion with a large fascia sign. Brick bays are set within the concrete projections, with vertical glass block windows, each with a small square of glass in the middle. On either side of the central projection, there are multipane ribbon windows with concrete trim. The one at the southeast corner is curved, with projecting concrete bands. A recessed brick east end with vehicular entries and multipane windows on lot line appears to be an older building (different brick).

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The First National Bank building is a 2-story rectangular structure with concrete cladding, original fixed windows, and a flat roof. The steel framing allows for a mostly glazed street level with heavy concrete elements on the upper levels. There is a band of small windows near the top of the building, each separated with a triangular concrete post. The entire building is capped with a simple concrete cornice creating an overhang. The heavy concrete at the middle of the façade also creates an overhang for the street level.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Federal Building, by Murphy & Mackey and William B. Ittner, Inc. is a rectangular four-story reinforced concrete building with concrete foundation, brick and limestone cladding, punched narrow windows divided by concrete projections, a flat roof, and ground level portico. The entire building is raised from street level on a concrete platform. A concrete cornice projects slightly over the façade.

1600-98 MARKET ST

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The building is a good example of the Brutalist style, with its slate panels set back within muscular concrete pilasters and minimal window openings. The building was designed by the firm of Leo A. Daly and completed in 1971.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

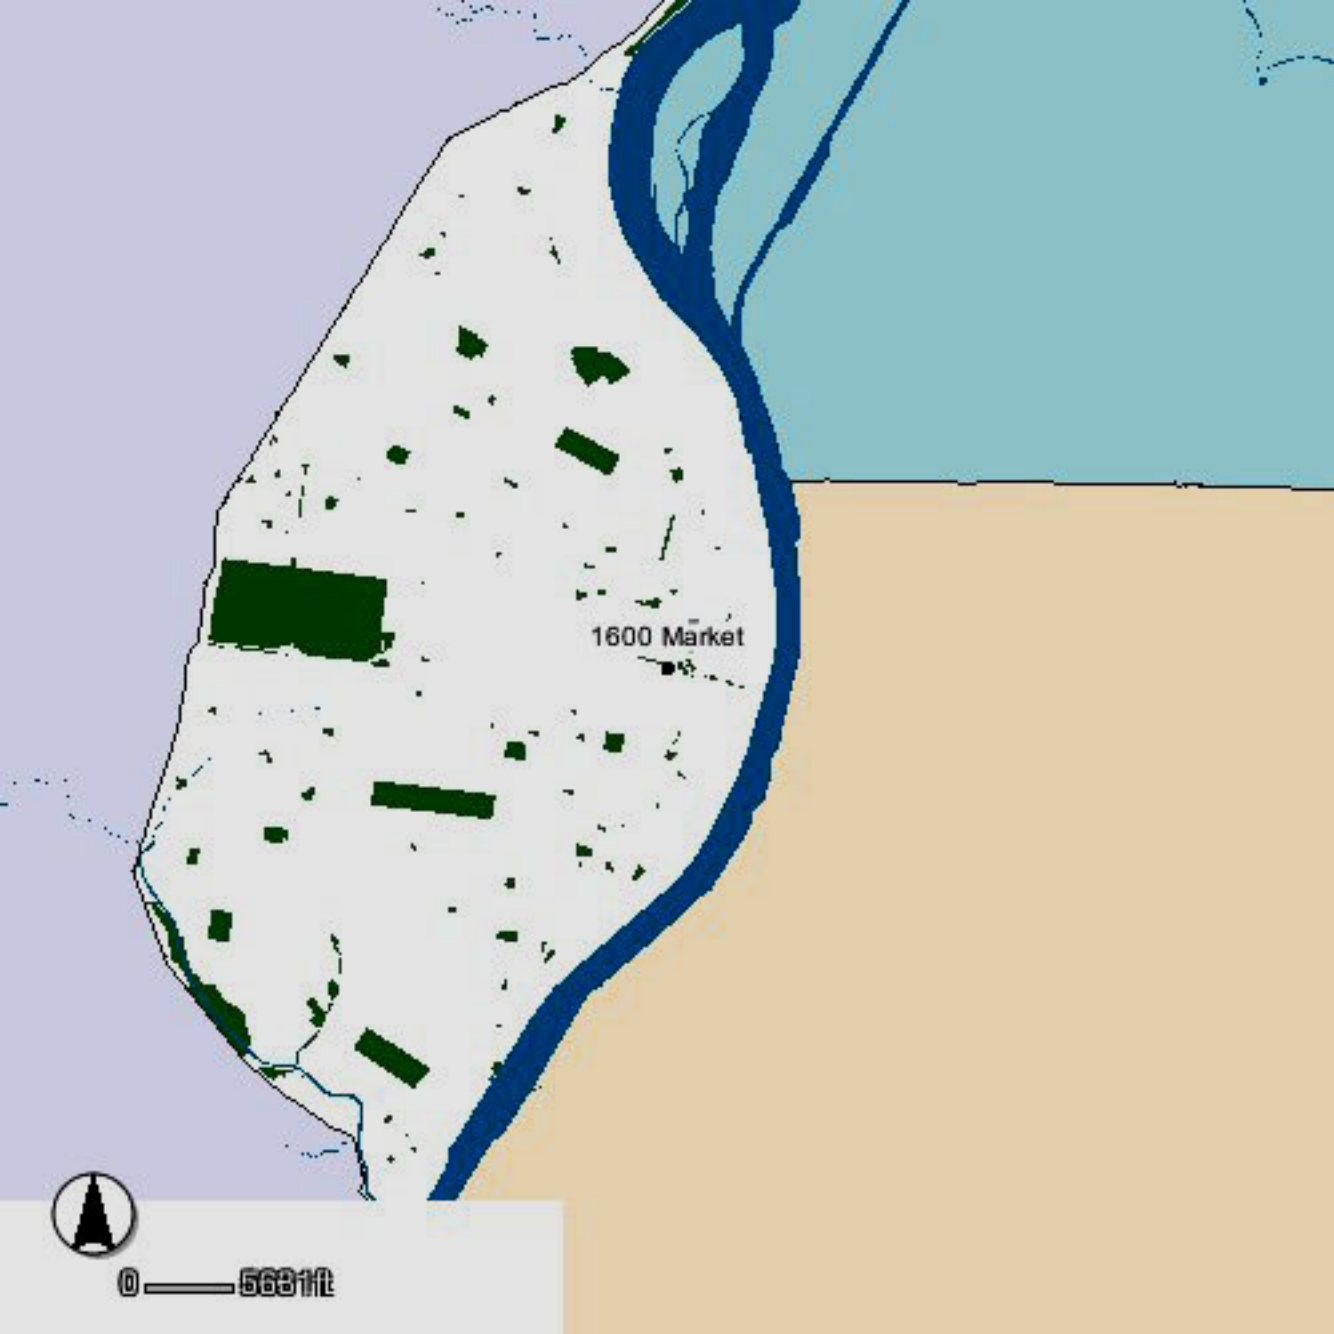

McCue, George. The Building Art in St. Louis: Two Centuries, 1981 ed.

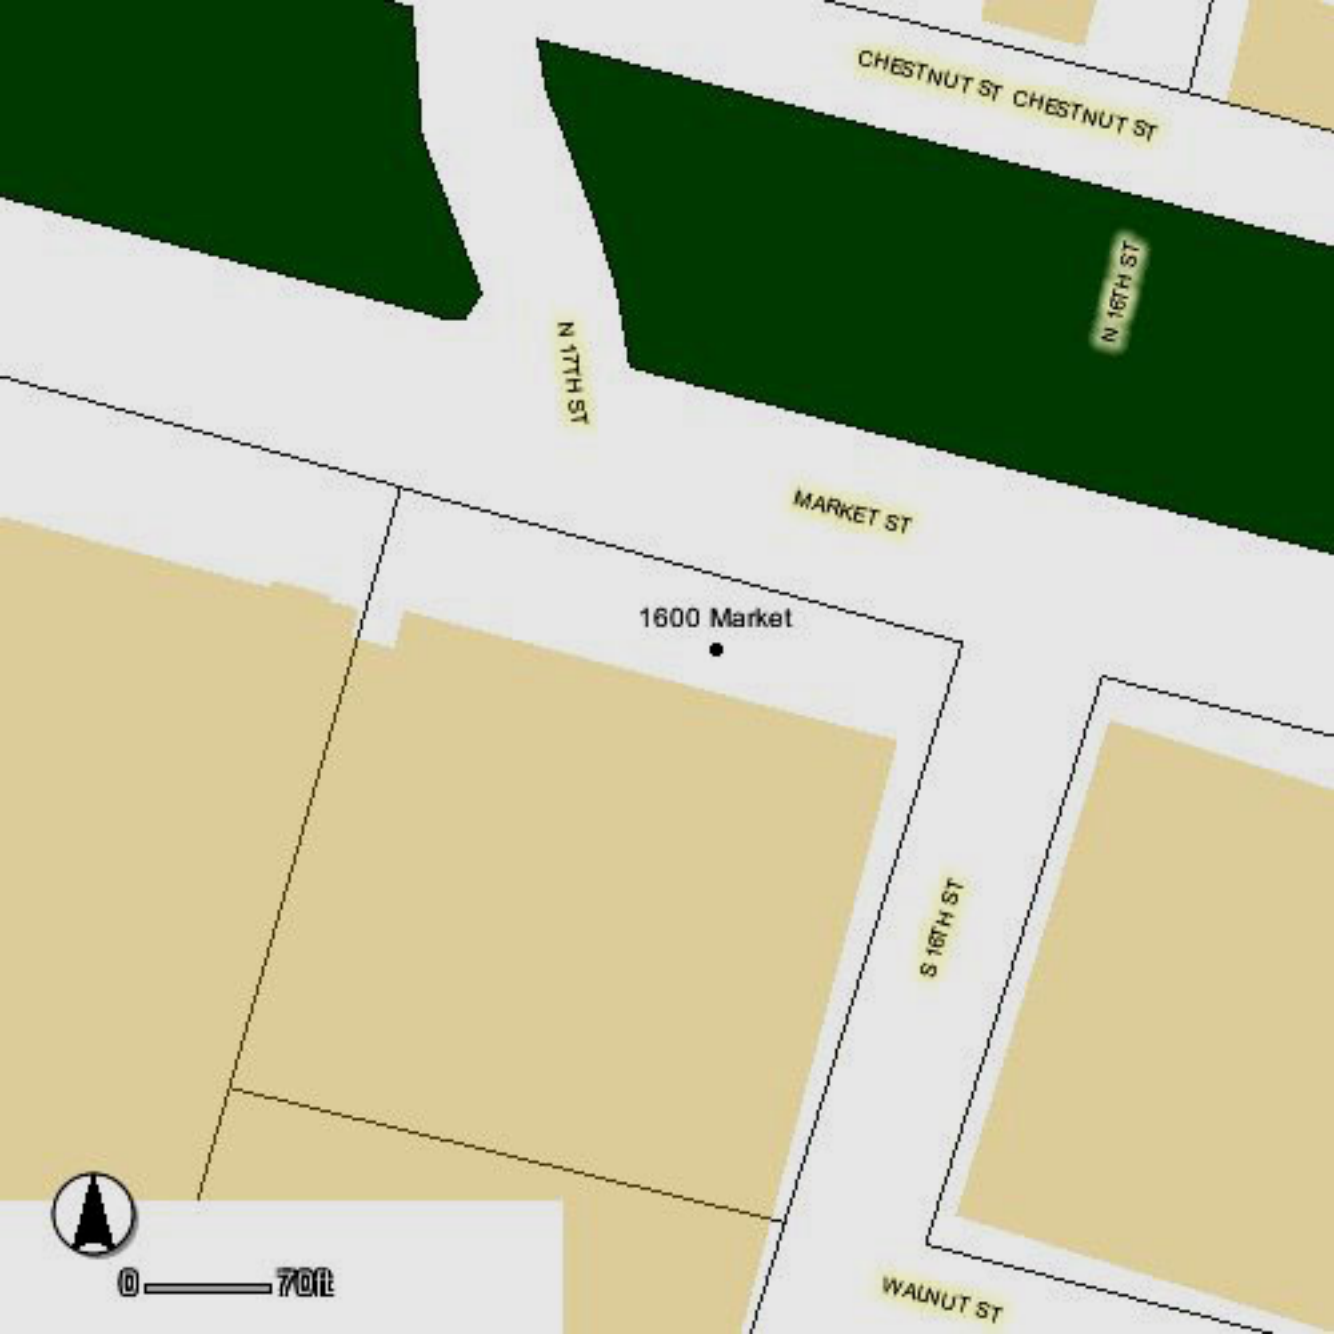

City of St. Louis Building Permit #E850; 10/29/1968. Leo A Daly Co., architect; McCarthy Brothers CC, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Post Office Annex, by Leo A. Daly, is a rectangular four story addition to the USPS Systems Center building. The building has cast-in-place exposed concrete walls and features black slate panels as well as a black granite base. The panels are nested between rectangular concrete pilasters extending from the base to the flared concrete cornice. The pilasters square off then taper inwards and terminate at the granite base. The only openings are monolithic floor to ceiling dark curtainwall windows, recessed slightly at street level, which occur between every pilaster. There is no public entry. The building also has a basement garage with an entry at the center of the 16th St façade.

City building permit #B7049, 1/7/1965. No Architect given; Martin Bloom & Assocs., contractor. "Office Building."

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This single-story rectangular building has aluminum framed windows, a flat roof, and mostly red brick cladding. The main corner entry is the only building portion composed of blonde brick, which forms two perpendicular slabs that project above the building's roofline. The main entry is covered by a metal canopy. The primary facade has a metal sun shade extending down from the roof line projecting over rectangular full height windows. The secondary façade has narrow recessed vertical windows.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Originally A.G. Edwards & Sons, Inc. and currently offices for Wells Fargo Banking, the six-story brick and precast concrete building was designed by Raymond E. Maritz & Sons. The building has an L shape footprint, a reinforced concrete structure, slit windowed curtain wall, and a flat roof. There is a concrete parking garage located under the building with two entry points off of Jefferson. The portion of the building perpendicular to Jefferson is complemented by a glass atrium to a building to the north.
