St Louis building permit A3520, 7/25/1955: Rathmann, Koelle & Carroll, architects; builder listed as H. B. Deal & Co, Inc.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This brick building, currently housing Christy Refractories Co, is a rectilinear building set on a slope. Projecting brick walls support a canopy over most of the single-story street-facing façade. Brick walls flank the entry storefront (possibly altered, with doors projecting out from the storefront) and extend outward to form projecting brick planters on either side of the central entry stairs. The sets of ribbon windows to either side of the entry have stone sills. The building has a lower level, fully exposed at the back corner of the building where the driveway slopes down.

City building permit #C2891, 1/11/1966. William H. Marx, architect; Industrial Construction Inc., contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This building, currently housing Milpaws Inc, is a single story rectilinear building with a cantilevered entry canopy over the recessed entry on the south façade. Clerestory windows follow the angled soffit of the canopy, which extends down to a single central pilaster support. Overhanging roofs to either side of the entry also have soffits that dip down and then back up again with the clerestory windows following the angle. The concrete cladding panels are separated by vertical reveals and the building is capped by metal coping. A low concrete planter sits in front of the central inset. The building is very cleanly executed.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

O'Fallon Technical HS opened in 1956. It was named for Colonel John O'Fallon, a St. Louis railroad promoter, financier, and philanthropist; the north St. Louis neighborhood of O'Fallon Park was once his country estate.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

Dan Dillon, "So, Where'd You Go to High School? Vol. 2: The Baby Boomer Years: 1950s-1960s." City of St Louis building permit 6/4/1954.

City building permit #H9935, 6/4/1954. F. Ray Leimkuehler, architect; Gamble CC, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Gateway High School building features an irregular footprint, 5 stories, and a flat roof. The windows consist of a horizontal rectangle of glass blocks with a row of aluminum framed awning windows. Multiple bays of windows are framed together in a slightly projecting concrete frame with concrete pilasters between bays, creating a horizontal emphasis in the building's brick façade. Lower wings of the building have stepping windows, growing taller with the slope of the ground.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

Gateway Tower was designed by HOK and completed in 1967. Gyo Obata was the principal designer, and structural engineers were The Engineers Collaborative.The International Style architecture of this building can be seen in the repetitive modularity of its elements, the ribbon windows, concrete balconies and the exposed structural piers. The building was part of a significant Civic Center riverfront redevelopment effort, which included the Pet Milk Building, Stouffer's Riverfront Inn, and the Busch Memorial Stadium.

A February 10, 1966 article in the New York Times announced "plans for 20-story building in St. Louis to be known as Gateway Tower, by a partnership formed of subsidiaries of the Columbia Broadcasting System and the Transurban Redevelopment Corporation of St. Louis. The building will consist of a 17-level tower on a block wide, three-level base and will rise on Memorial Drive close to the Gateway Arch and its 91-acre park. Hellmuth, Obata and Kassabaum are the architects. The building is expected to be completed next year. Columbia Broadcasting will move its two St. Louis broadcasting stations – KMOX-TV and KMOX – into the building."

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

McCue, George. The Building Art in St. Louis: Two Centuries, 1967 & 1981 editions.

Daily Record, 19 August 1966

City building permit #6607, 8/18/1966; Gateway Tower Development Corp. owner; Rallo Construction Co. builder, 5000 Kemper; Gyo Obata architect; Ry Tao engineer; erect 21-story office and studio building, 329,580 square feet at 310 Market, $6,000,000.

New York Times, February 10, 1966 – "C.B.S. in St. Louis Project" by Lawrence O'Kane.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Gateway Tower, currently in use for offices as well as a TV station, has a rectangular footprint with a garage and a multi-story tower. The garage has a concrete foundation and concrete cladding with one ribbon window stretching along the length of the Memorial Dr. façade and wrapping the corners at both Walnut St. and Market St. Aside from this window and the occasional opening for a door, the main building has a large, plain concrete base. The tower has a steel structural system with glass cladding and concrete balconies wrapping the circumference at every level. The concrete railing of the roof of the garage aligns with the first balcony of the tower, and both sections have flat roofs and ribbon windows. The tower entrance is on the Market Street side, and the TV station occupies the lower section of the building.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

City of St. Louis Building Permit CC7912, 1/29/59. "Swimming Pool & Bath House." Kramer & Harms, architects; Engineer listed as Smith-Hanlon-Zurheide-Levy engineers; builder Karl Kraus CC.

Also photo/clipping from St. Louis Post-Dispatch, 09/04/1959, "Fairground Pool Dedication."

Also Carolyn H Toft, Esley Hamilton, and Mary H Gass, ed. By George McCue, The Way We Came: A Century of the AIA in St. Louis, 91.

Also finding aid description of University of Missouri Library information about Kramer & Harms, accessed online at http://www.umsl.edu/~whmc/guides/whm0781.htm

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Designed by Kramer & Harms, Architects, the single-story apsidal shape pool facility features a low pitched butterfly roof rising from the center over low box wings supported by exposed concrete "lily pad" columns set back from the roofline perimeter creating overhanging eaves. The entire structure is open-air. The low box wings are rectangular brick structures with stone decorations and banding. The walls sheltered under the butterfly roof are curved with mosaic tile and painted concrete.

St Louis building permit #R12219, 9/29/1948: "Enclose root beer stand for winter use." Frank Hilliker, architect; John Ditenhofer, contractor. Also A11014, 4/16/1957; D9778 8/23/1968.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Goody Goody Diner is a rectangular single story building. The building has a flat roof, original windows, a concrete foundation, and concrete façades. The east façade is brick, has large square windows and a curved glass curtain wall system wrapping along the north façade. The entire building is wrapped with an overhung simple metal cornice. The roof has billboard signage that wraps from the south to east façade, attaching to the metal cornice. There is also a large blade sign mounted on the roof.

5200-40 OAKLAND AV

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The building is architecturally significant as a good example of a commercial building using the Miesian style, a subgroup of the International Style. The building is rectilinear, with exposed steel structure, and illustrates the Modern Movement's idealized separation from the street and sidewalk.

The original building may have been constructed as a warehouse to serve Scruggs Vandervoort Barney department store. The 1957 McCue article (see sources) mentions the "Scruggs Vandervoort Barney warehouse near the corner of Macklind and Oakland completed three years ago," which would put its completion date in 1954, if this is the warehouse building (likely). The City Assessor has a date of 1965 for the building, which may refer to an addition or substantial rehabilitation. The design of the front office block would seem to support this later date for the Modern Movement part of the building.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

1956 City Directory has Scruggs Vandervoort Barney (warehouse) at 5242-48 Oakland.

A recent online realty notice says the building was constructed in 1954. http://www.loopnet.com/Listing/16217282/5200-Oakland-Ave-Saint-Louis-MO/ Also a newspaper article "New Vista on Oakland Ave," by George McCue, dated 7/21/57, mentions the "Scruggs Vandervoort Barney warehouse."

No City building permit was found for this property.

Also, see Columbia University Library finding aids for projects designed by Abbott Merkt & Co, including "Scruggs-Vandervoort-Barney Service Building" at Oakland Ave, drawings dated Oct 1953-March 1954. See

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Designed in the Meisian style, this rectilinear exposed steel frame building has infill masonry panels flanked by vertical three-part windows with projecting steel frame. The single-story structure is mounted on a raised plinth edged by concrete planters, in keeping with its style. It is almost square in shape, and surrounded by parking on three sides.

St Louis building permit 5/26/1972, #G674. Ralph R. Shaw, architect. Builder listed as Pernikoff CC.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The square building was built as a single-story bank with battered brick walls. Tall, narrow windows are recessed between brick pilasters and their brick sills angle outwards to drop to the foundation just before the pilaster line. The building is topped by a thick concrete projecting cornice which flares slightly outwards. The entry on the south façade is recessed and features floor to ceiling windows.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

Designed by Harry Weese & Associates (Benjamin Weese, primary designer), the buildings are set on light raised concrete bases with deeply recessed, open-air ground floors. The solidity of the walls, massive tower forms, and narrow, slot windows mark the buildings as Brutalist in style, but brick rather than the typical concrete seen outside St Louis. The school is on the site of the Forest Park Highlands amusement park, destroyed by fire in 1963.

The Forest Park Community College was, recalls Ronald E. Schmitt in the office of Weese at the time, "a conscious effort to create an urban setting & image for a city campus." Weese rejected traditional collegiate campus plans with buildings around an axial mall. The campus was not organized by academic department; instead, lecture halls and classrooms were shared and spaces were never idle. The final design was based on distinct functional and spatial volumes linked with circulation. Assembly & library space were in large, column-free rooms; classrooms & offices in elongated teaching wings, parallelling the highway to the north, and extending east and west from a central library & support building. A plaza and amphitheater near campus center at the site's high point was outdoor assembly space. Weese selected a large red brick (St. Louis was a "brick town") because of its texture & scale. The education wings were articulated and intended to stand out from the more neutral expression of library and performing arts buildings. Service spaces were grouped in plan and stacked, separated from main education wings. The campus was built in phases: the east education wing & library completed c. 1964-1965; the west education wing & student services and performing arts center, 1968-1970. A field house/gymnasium, was built on the campus' east side in 1967-68.

The campus illustrates Weese's desire for a modern architectural expression with concern for humanistic responsiveness. The plan for a compact community college took advantage of computer-assisted planning, shared spaces, and the particular demands of commuting students to create a campus with a unified setting & civic presence, argues Schmitt, who asserts the quiet strength & dignity of the campus captures the spirit of historic St. Louis.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The primary components of this four-story brick building, owned by the St. Louis Community College, are two long rectangular "spines". A rectangular series of towers is connected to each spine, and the two overlap at one end. A gymnasium and another one-story volume occur at the overlap. These have limited openings with standing seam metal accents at roofs and entries. The primary buildings are set on light raised concrete bases and feature a recessed and open-air ground floor. The second level features recessed slit windows, the third level has a recessed window, and the fourth level, with minimal windows, overhangs the walls below.

Nuns and priests residences are located to the north of the sanctuary; school building to the west.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The St Joan of Arc Church, by A.F. and Arthur Stauder Architects, is an irregularly-shaped church building with a flat roof. It has concrete foundations, buff brick cladding, a square tower to the southeast, and an accentuated entry bay. The entry is framed by a projecting concrete frame which extends above the roofline and is capped by a slight segmental arch. Above the doors is a decorative mosaic tile panel reaching up to the roofline flanked by projecting concrete pilasters and by full height slit windows. The remainder of the church features similar vertical slit windows with dark brick inset above and below. The windows are by the Emil Frei Stained Glass Company.

511 OLIVE ST

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

511 Olive was remodeled as part of First National Bank's five-year modernization and expansion project that enabled the bank to remain in its donwtown location. The Bank Building & Equipment Co. designed the project. 511 Olive was refaced and remodeled at this time.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

No building permits were found for this property.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

511 Olive St is a 5-story building, originally constructed in 1913 (?), sandwiched between two high-rise buildings with a tall narrow street façade. It is interconnected to the former Mercantile Library on the north. At street level the building is clad with granite tiles and features three glass doors and an aluminum panel. The upper levels are clad with concrete tiles and each level has a large recessed band of windows extending to one side of the façade. Not including the street level, the entire façade is surrounded with a simple concrete frame projecting from the façade slightly.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Blue Cross Building, designed by HOK, is a rectangular 6 story office building with a parking garage to its south. With concrete foundation, concrete cladding, historic windows, and a flat roof design this building's visual interest comes from its fenestration pattern. Street level has floor to ceiling glass curtainwall with slim mullions and minimal obstruction. The upper floors each feature wide ribbon windows that wrap the entire building only interrupted by dispersed vertical projections. The main façade also features two large square projections, each with its own façade, that extend one-story above the roofline. Additionally, the street level glass façade is recessed by a few feet and every ribbon window is recessed slightly as well.

City building permit #B6911, 12/22/1964. Frederick C. Sternberg, architect; J.E. Williams CC, contractor. "For General American Life Insurance Co., 140 x 102."

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This building, currently housing Afram Corporation, is a two story rectangular office building featuring in the southeast corner a concrete framed glass atrium, containing the main entry, projecting above the roofline. Inside this atrium there is a "Saarinen" staircase. This atrium is double height and the glass is recessed from the concrete framing. Both main facades feature concrete bases and coping as well as columns in equal bays. Full height slit windows sandwich each column followed by brick facing. Enclosed parking is located under the building with an entrance on 16th St. This entrance is the only disruption from the facades overall pattern with large horizontal rectangular windows and a garage door. The back façade continues these large windows and the side façade is entirely brick with no fenestration.

This L shaped single-story building features a double height retail space and a lower garage wing. The higher volume has mosaic tiles covering the upper half of the building above the storefront, and arched metal awnings in a scalloped pattern attached to metal pilasters projecting above the roofline. The west façade of the store is entirely brick with an occasional entry. The east façade of the garage features the same mosaic tile, window, pilaster pattern as the store. The garage portion of the building has been altered with new garage doors.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The early-1980s era cladding added to this building is interesting and possibly could contribute to the building in its own right. For this reason the building is noted as being "contributing" rather than "not eligible." If the cladding were removed altogether, the building may be individually eligible for the National Register.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

George McCue, The Building Art in St. Louis: Two Centuries, 1981.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This building was designed by Anselevicius, Montgomery & Rupe and is a U shaped single story building with a covered parking area located under the building. The reinforced concrete structure has non-original aluminum cladding and an enclosed courtyard. The aluminum-clad exterior is punctuated by irregular fenestration and intentional seaming. Areas with large windows are accompanied by L shaped projections, also aluminum-clad, for sun shade and privacy. The main entrance is recessed into the façade while the roof remains creating a small canopy. The original building exterior was board-formed concrete, still visible at the retaining walls.

2650 OLIVE ST

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

this seems to be the Family & Children's Service of Greater STL building, 1967, Smith & Entzeroth, pictured in McCue last 2 editions. The volume at the corner of Beaumont and Olive appears to have been altered significantly, however, with another story on top.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

No building permits were found for this property.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The two-story section, the original portion, has very narrow vertical windows recessed into paired slits in the orange variegated brick façade. These slits open up to larger recesses which hold single square light windows at the second story. The addition has no window openings on the front façade and is connected to the main structure by a glass-front flat-roofed entry. A frame addition has been added above the entryway and one-story section. On the west end, the addition cantilevers over the original brick structure and rests on a concrete beam supported by circular concrete piers. The addition is clad in colored aluminum with horizontal banding. A projecting copper awning wraps around the addition above the windows.

City building permit #A1347, 3/7/1955. F. C. Ashton, architect. R M. Moore, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Originally the Church of Christ built by the minister R. M. Moore, this structure has one-story and two-story components. The primary, two story volume has an exposed concrete box frame façade overlaid on top of a typical masonry building. The concrete frame projects out past the face of both stone panels and brickwork. The second story features a decorative art-glass window and stone panels, while the first story has ribbon windows atop red brick half-walls with half-brick banding. The one-story portion is similar.

This church is a two-story variegated brick building in two parts, tied together by a framed connection. One section is a one-story simple gable front building facing McLaran. The main section is cantilevered over a raised concrete base with ribbon windows. The main floor has tall bays of vertical slit windows, with clerestory ribbon windows above. The Park Lane-facing façade has vertical wood paneling delineated with slender vertical orientated fixed windows, and a recessed lower-level alcove framed by two concrete support columns.

3655 WEST PINE BLVD

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The building is architecturally significant as an example of the Modern style's emphasis on revealing the structure of the building on the exterior, and for the expression of the masonry panels as pure curtainwall, hanging from the structure. The firm of Leo A Daly has had three successive Presidents; first Leo A. Daly Sr., then Leo A. Daly Jr. upon his father's death in 1952; and finally Leo A. Daly III in the early 1980s. Leo Anthony Daly Jr. was educated at Catholic University of America, and his firm was based out of Omaha but had offices in many states across the U. S. The St. Louis office opened in 1949, one of the first outside of Nebraska. Daly received honorary awards from Catholic institutions for his service as well as for his achievements in architecture. One of these was for church architecture, awarded by the National Ligurgical Conference of St. Louis (1967). Some of Daly's principal works from the late 1950s and 1960s are Clarkson Hospital (Omaha, NE, 1955); the Guarantee Mutual Insurance Co Headquarters (Omaha, NE, 1961); the Astrodome (Houston TX, 1961-66); and the Cathedral of the Risen Christ (Lincoln NE, 1963). The library was dedicated in 1959 and contains an extensive collection of archival material brought from Europe in 1835. The library was paid for in a fundraising effort by St. Louisians, Catholic and non-Catholic, who raised $4,250,000.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

City of St. Louis Building Permit A11701, 6/20/57. Leo Daly, architect and engineer. G. L. Tarleton CC, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Pius Memorial Library, St. Louis University, was designed by Leo A. Daly. The façades are vertical panels of stack bond red bricks flanked by casement windows emphasizing the exposed structural piers. The brick panels terminate at the second floor, allowing the structural piers to stand alone creating a portico. Under the portico, the ground level is clad in stone panels and a storefront system. The main entry is delineated with a projecting angled metal canopy.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The simplicity of the curved 20-bay colonade executed in smooth rectangular concrete columns and a simple cornice convey a serenity appropriate to a public library. The entry is emphasized by a contrasting steel cantilevered rectilinear canopy hovering over cast concrete curved walls. Glass is deeply recessed within the colonnade and is tinted to accentuate the shadow effect. Remaining facades are blond brick.

No building permits were found for this property.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This building, a mirror of its neighbor at 101 6th St, has a rectangular footprint encompassing one city block and is 8 stories in height. It has concrete foundation and structure with a mix of concrete and metal cladding. On the upper 7 stories (used as a garage) the façade is enveloped by a vertically oriented concrete sunscreen. Behind the screen the garage is open deck with concrete parapet walls. The first story, with commercial use, features concrete and brick cladding, large metal clad pilasters, and a bay of slender fixed windows. Metal sky bridges connect the building to its pair by crossing 6th St.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

This small building was designed by Harris Armstrong, one of St. Louis' Modern Masters.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

St Louis building permit GG1319, 11/16/1961: "office building." Harris Armstrong, architect; O.H. Litthe, contractor.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This small single-story building is L-shaped in plan. The Jefferson St. façade's main feature is a large row of banded windows with a brick chimney projecting upwards above the roof line. The Pine St. façade's main feature is an irregular metal canopy. It is flat-topped supported from below by L-shaped slim metal posts with curved corners. The main entry is accessible on this façade by stairs or an ADA ramp running the length of the façade. The south façade has large paired windows with decorative elements protecting the glass as well as an exit door.

Built as a medical building by Dr. Henry E Hampton.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The simplicity of the curved 20-bay colonade executed in smooth rectangular concrete columns and a simple cornice convey a serenity appropriate to a public library. The entry is emphasized by a contrasting steel cantilevered rectilinear canopy hovering over cast concrete curved walls. Glass is deeply recessed within the colonnade and is tinted to accentuate the shadow effect. Remaining facades are blond brick.

City building permit #A392, 6/18/1962. Sverdrup & Parcel Associs, architects & engineers. Kloster Co., contractor. "School."

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The high school is an irregularly shaped three story building. Its many facades feature concrete framing, aluminum windows, and various forms of brickwork. Ribbons of windows punctuate the facades at all levels. The one-story main entry projects slightly and features a metal canopy over the bay of doors with clerestory windows above.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

A decision during the late 1950s by the Director of Public Utilities to electrify the Chain of Rocks Station made the Bissells Point facility obsolete. The Chain of Rocks facility was then updated to serve as the City's main water works, primary pumping station, and filter plant. A new Coagulant House (1962) was positioned at a higher elevation so that the chemical lines to the primary and secondary coagulation stages could be shortened considerably. The Primary Pumping Station was modernized and the building received a modern façade (ca. 1960). A concrete block service building (1962) stands near by. A building (ca. 1960) that appears to house various functions is located near Riverfront Drive.

Schworm, William B., A History of the St. Louis Water Works (1974-1968). http://www.stlwater.com/history2.php
Sandborn Map, Vol. 17, Rev. 1997

Building permits for many of these buildings were not found.
City building permit #GG911, 10/21/1961. "Garage and repair shop." No architect stated. Lecontern CC, contractor. Also A7371, 5/3/1963; B532, 10/3/1963.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

Chain of Rocks Water Treatment Plant. A new clear basin of 10 MG capacity was built to cushion the suction of the High Service pumps. E.E. Easterday, Engineer in Charge of Design and Construction, designed the unusual wall structure that consists of contiguous truncated cones, which allow the hollow interiors to function as a dry well. This set of settling basins is parallel to Riverview Drive. A second set of settling basins are separated from the larger ones by a drive. A clear water basin is at the south end. A filter house and "treating and tank building" near these feature date to 1914.

A red brick veneer clads the Primary Pumping Station, which has a flat roof. Vertical and horizontal rectangular window openings are filled with glass block and outlined with concrete bands. A ramp on the west side into the building is flanked by sets of steps. An arched canopy and screens with an irregular lattice pattern feature red and blue quarter-round forms. Lettering reading "Primary Pumping Station Water Division" is attached to the west side of the building.

The Coagulant House has the form of a concrete tower, part of which is veneered in brick. The brick clads the west wall of the taller portion and the lower portion of the adjacent area, reading as a L shape. The remainder of the exterior has a subtle checkerboard quality created by differences in the texture of the gray concrete. Two rows of openings puncture the lower portion of the concrete walls and there are openings in the tower.

A third building stands south of the settling basins and near Riverfront Drive. It has a rectangular footprint and a taller volume flanked on the east of what appears to be a lower row of offices facing the street and another one-story area on the east side. Red ceramic or porcelain tiles flank the entrance which is sheltered by a shallow canopy. Horizontal rectangular window openings are filled with glass block.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

Construction began in 1968 on a new sanctuary after a 1957 fire destroyed the previous (1920s) brick sanctuary, according to the Lindenwood Park Neighborhood website. The sanctuary was dedicated November 30, 1969, and Memorial Hall chapel was completed in approximately 1974.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

This Church is a irregular building with a sanctuary, office and three-story classroom wing. The building has a concrete foundation, light red/orange brick cladding, and flat roof. The sanctuary has a rounded end, with pilasters separating nearly ground to roof narrow concrete-framed windows, with secondary façades featuring identical fenestration. The recessed curtain wall entry has a concrete canopy. A tower at the junction of the classroom wing with cut-out brick vertical bands anchors the building. The lot slopes downward so the rectangular wing at the rear has three full stories.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

The Machacek branch Library, designed by Berger-Field-Torno-Hurley Architects, is a single-story Brutalist style building set into a hillside with partially visible building façades. In 1973, a "tree saving" ceremony rather than a traditional "ground breaking" was held. The building is architecturally significant for being one of the smallest-scale examples of Brutalism in St. Louis. The building was named for Charles Machacek, a piano and violin teacher. He bequeathed his estate to the St. Louis Public Library for a branch library in his family's name. The total cost was $245,000.00, of which he paid for $103,327.00. The library opened September 11, 1974. The building won a third place award for new construction in the 1974 8th annual City Beautification awards program.

Berger, Field, Torno & Hurley was a St. Louis-based firm dating from 1962 to 1976. Principals Charles T. Berger and William A. Field had worked in other firms as principals prior to their association; the other principals were Paul Hurley and Laurent Torno, Jr.

No building permits were found for this property.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Machacek branch Library, designed by Berger-Field-Torno-Hurley Architects, is a single-story building with a concrete foundation and flat roof set into a hillside with partially visible building façades. The entire building has exposed gray concrete-slab cladding with horizontal joints at traditional cornice level and varied roof-line heights. The interior walls and ceiling are also exposed concrete. The hollow block-shaped ceiling sections allow light fixtures to be recessed.

No City building permit was found for this property.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The McDonnell Medical Center of Washington University School of Medicine was designed by Murphy, Downey, Wofford & Richman. It is a massive rectangular multi-story building predominantly executed in a pale buff brick. Its east and west facades feature sculptural half-circle projections housing the utility lines. The primary south façade balances uncomfortably above a recessed street level entry. The lintel, along with partial height entry level walls, accentuates the towering mass of the structure. Slit windows stretch the face of the façade vertically. At approximately the seventh story the façade steps back and the roof becomes a terrace.

Shaw Avenue United Methodist church; light orange brick; essentially traditional with some modernist handling of ornament. Church and school/office building. Church has simple form with front facing gable. Shades of blonde brick. Cast concrete entry with marble inset with inscription: "Shaw Avenue United Methodist Church." School/office extends from northeast corner of church.

The John S. Lehmann Building, located in the Missouri Botanical Gardens, was designed by HOK. It contains a herbarium, library and educational center. It is a single-story steel structure with irregular massing, concrete cladding, aluminum framed floor to ceiling windows and a dynamic roof line. The main entry features a small glass atrium which peaks near the center of the building.

21.(cont.) History:and significance. Expand box as necessary or add continuation pages.

Joseph D Murphy and Eugene J Mackey worked in partnership for two decades as Murphy & Mackey, 1950-1970. Mackey received a degree from Washington University in St Louis in 1962 and a Master's degree from Harvard in 1963. Murphy attended Rockhurst College in Kansas City, then M.I.T. from 1927-29, and then the Ecole des Beaux Arts from 1930-32. Both men taught at Washington University. Murphy was the partner in charge of the design of the Climatron, in Shaws Garden, 1961. The building won the R. S. Reynolds Memorial International award from the AIA in 1961 for the building's use of aluminum in its extruded structural system. It is based on R. Buckminster Fuller's geodesic domes, but the Climatron was the first geodesic dome to be enclosed in Plexiglass and the world's first completely air-conditioned greenhouse. The 175' diameter quarter-sphere dome is not partitioned but achieves a range of different climactic conditions by its sophisticated controls, designed by Frits W. Went.

22. (cont.) Sources of information. Expand box as necessary or add continuation pages.

Listed in 1964, 1967, 1981 George McCue "The Building Art in St Louis: Two centuries." Also Library of Congress HABS entry by Denys Peter Myers for Climatron, Missouri Botanical Garden, 1983, online at http://www.loc.gov/pictures/item/mo0413/ and AIA Historical directory- 1970 American Architects dictionary accessed online at http://communities.aia.org/sites/hdoaa/wiki/Wiki%20Pages/1970%20American%20Architects%20Directory.aspx

No building permits were found for this property.

40. (cont.) Description of environment and outbuilding. Expand box as necessary or add continuation pages.

41. (cont.) Description of primary resource. Expand box as necessary, or add continuation pages.

The Climatron – structure, in the Missouri Botanical Garden, is a geodesic dome of aluminum and glass (originally plexiglass) designed by Murphy & Mackey. The circular quarter sphere dome received a structural second outer dome when the original plexi-glass was replaced with glass in 1988. This chang of material from plexiglass to glass, and the additions, do not significantly alter the dominant form of the geodesic dome. A single-story rectangular building is attached to the west and a large shed-roofed structure with the same aluminum and glass aesthetic sits to the northwest. The grade level of the dome features aluminum framed windows between the exposed steel structure supporting the dome.
